LACOMBE MILLING CO.
PIONEER BRAND FLOUR
Sprinkled Bran Wheatlets
Pioneer Flour, made at home; clean unadulterated No. 1 Wheat, not treated with acid or gas.
With the steadily increased prices of grain will come efforts of some to reduce quality, to maintain low, throat-cutting prices. Poor quality is expensive at any price and usually injurious to health.
Ask for and demand that you get Sprinkled Bran Wheatlets and Pioneer Brand Flour—the essence of Purity and Nature's product.

Golfers Enjoy Two Big Days

Record Attendance at the Annual Tourney

Wednesday's Play.

Lacombe, July 13—Playing close to par golf, Lyman Welliver, of Red Deer, led the qualifiers in the fourth annual tournament of the Lacombe Golf and Country club here Wednesday with a medal score of 74, a card that was two over par.

With an entry list of 84, something in the neighborhood of 20 more than at any previous Lacombe tournament, play commenced Wednesday under fine weather conditions and on a course that even was in better shape, the fairways being high-class and the sand greens uniform throughout. Scores of 84 or better qualified for the championship flight and in the list of competitors were golfers from Edmonton, Calgary, Stettler, Camrose, Red Deer, Coronation, Alsask, (Sask.), Wilcox (Sask.), Barrons, Trochu, Castor, Bentley, Hughenden, Lethbridge, Wetaskiwin, Carstairs, Craigmyle, Sylvan Lake, Olds, Hanna, Bashaw, Aspen Beach and Lacombe.

Those qualifying for the championship flight were Lyman Welliber, Red Deer, 74; Herb Johnson, Camrose, 75; R. Capstick, Calgary, 79; Charlie Willis, Stettler, 79; G. M. Foster, Calgary, 79; A. H. Templeton, Olds, 80; C. W. Clark, Trochu, 81; J. MacDonald, Lacombe, 81; Julian Garrett, Edmonton, 82; Joe Welsh, Red Deer, 82; H. B. Hanson, Wetaskiwin, 83; Leo Mann, Edmonton, 83; Jack Ellis, Stettler, 84; A. J. Lawley, Hughenden, 84; W. N. Graham, Hanna, 84.

Results in the flights were:

Championship flight—D. Capstick won from Jack Ellis, L. S. Mann won from Herb Johnson 19th hole; C. L. Willis won from A. J. Lawley, Lyman Welliver won from H. B. Hanson, J. MacDonald won from C. W. Clark; W. N. Graburn won from A. H. Templeton, Julian Garrett won from H. Teare; Joe Welsh won from G. W. Foster.

First flight: G. Duckworth, Stettler, won from R. N. Jamieson, Craigmyle 20th hole; Tom Jackson, Lacombe won from K. McMurdo, Wetaskiwin, G. L. Walker, Sylvan Lake, won from J. L. West, Bashaw, Herb Henderson, Lacombe, won from Walter Duckworth, Stettler; Matt Mather, Castor, won from Chas. Hislop, Carstairs; D. Podersky, Edmonton, won from D. W. Robertson, Red Deer, H. S. Northwood, Coronation, won from Max Wyman, Edmonton.

Second flight: F. O. Vickerson, Lacombe, won from Dr. F. E. Dodds, Red Deer; M. Johnson, won from B. H. McCaugherty, Lacombe; F. B. Roberts, Edmonton, won from Dr. K. R. McLean, Calgary; C. A. Fleming, Alsask, won from T. P. Roberts, Edmonton; Howard Emery, Edmonton, won from W. H. Beacom, Bentley; C. A. Sneath, Lacombe, won from P. Thorpe, Bentley; Joe Sherwood, Edmonton, won from D. B. Johnson, Calgary; W. Wells, Bashaw, won from Jim Orr, Wetaskiwin.

Third Flight: Dave Milne, Edmonton, won from W. N. Morrison, Lacombe; H. S. Trame, Lacombe, won from C. E. Jarrett, Wilcox, Sask.; Jack Morrison, Lacombe, won from E. Aboussafy, Wetaskiwin; J. I. Mann, Edmonton, won from D. A. McDonald, Lacombe; T. J. Dyke, Coronation, won from Dr. R. B. Sinclair, Edmonton, W. J. Shields, Wetaskiwin, won from A. A. Nichols, Ponoka; Dr. A. E. Kennedy, Stettler, won from F. W. Thorp, Bentley; A. Jensen, Coronation, won from Dr. C. E. Husband, Red Deer.

Fourth flight—In the fourth flight the first round matches were not completed, but the results in when play ended for the day were: A. E. Baycroft, Barons, won from J. W. Moxness, Camrose, J. S. McCormick, Lacombe, won from B. J. Densmore, Coronation; C. L. Lansdell, Camrose, won from Dr. W. B. Lamb, Camrose. Only two Edmontonians, L. S. Mann, and Julian Garrett are still alive in the championship flight, the other six being Lyman Welliver, Red Deer; R. Capstick, Calgary; C. L. Willis, Stettler; J. McDonald, W. N. Graburn, Hanna and Joe Welsh, Red Deer.

Thursday's Play.

Lyman Welliver, of Red Deer, low medalist in the qualifying round and favorite from the go-in, Thursday won the championship of the tournament defeating his fellow townsman, Joe Welsh, at the 19th green. Welsh was the holder of the trophy last year, having won in the final of 1932 over C. L. Willis, Stettler.

Thursday's final was one of the most interesting ever seen in the Lacombe tourney, and the play was watched by a sizeable gallery of enthusiastic golf followers. From start to finish the issue hung in the balance and there was little to choose between finalists. Welliver's range off the tee gave him an edge on several of the longer holes, but the accuracy of Welsh's short game and his putting ability kept him right in the fight until the finish.

It was a good final for Welliver to win and a hard one for Welsh to lose, and both came out of the struggle with credit. What breaks there were in the game were evenly divided, although on at least a couple of occasions Welsh failed to take advantages when his opponent was out of bounds. Welliver's ability to execute shots of near perfection in those instances saved him a heap of trouble.

The edge swung either way several times through the playoff, and at no time was there anything like a wide margin either way. They were all square when they made the turn, and the situation was the same when they had holed out at the sixteenth. At the seventeenth Welsh edged ahead when his rival slipped a stroke over par, but he was unable to get the half at the eighteenth that would have enabled him to retain possession of the trophy.

At this important stage of the match Welliver hit a screamer of a tee shot about 270 down the middle and then laid a long iron close to the green. Meanwhile, Welsh smothered his drive and also failed to get the best results with a brassie second, failing to reach the edge of the green until he had played his fourth. Welliver then pitched up and was down in a single putt for a birdie four to square the match, and at the extra hole he repeated. He drove a long ball down the middle, was practically green high with his second and had a putt for another birdie four while the best Welsh could manage was a par five. It was a fine finale to a match that produced a wide variety of good golf shots.

Welsh took the lead at the first hole when he registered a birdie four, sinking a lengthy putt after reaching the green in three, but it was all even at the short second, where Welliver found the green from the tee and took a pair of putts for a three while Welsh had to chip on and failed with a long putt.

Losing a stroke by being out of bounds cost Welliver the third when Welsh was down in a par four, but at the fourth the match was squared again when Welliver helped himself to a birdie three.

Off this fourth tee Welliver hit one of the longest shots seen in the tourney. He was over the raised green having carried the gully in front, and dead in line with the pin. For the next five holes the match remained all square with five halves in a row, Welliver recovering finely on one occasion from an out of bounds penalty.

At the tenth, Welliver went on up for the first time during the match when he registered a birdie four, but after halving the short 12th, Welsh won the 13th to again get back on level terms, a wild tee shot by Welliver giving him the opening. From there on until the finish no more holes were halved.

Welliver went one up at the 13th only to have Welsh snap right back into it by taking the next two in order with a birdie and a par. The 16th hole found Welliver to again square the match, and then at the 17th the advantage swung the way of Welsh when he got a good four after an indifferent enough tee shot, Welliver having got into trouble.

Needing a half at the 18th to win the match and trophy, Welsh as pointed out above, failed to get the right kind of results while Welliver went on to click for two birdies in a row and settle the issue very completely.

Following are the cards:

Welliver, out	435	353	445
Welsh, out	444	453	445
Welliver, in	436	454	354 4
Welsh, in	634	543	446 5

There was an extra hole final with D. L. Walker, of Sylvan Lake, and Dan Podersky, of Edmonton, met to settle the first flight winners, Walker, of Sylvan Lake, and Dan Podersky, of Edmonton, met to settle the first flight winners, Walker finally taking the honors. The situation in this match was practically the same as that in the championship flight final, Walker coming from behind to square the match at the 18th and then go on to register his win at the extra hole.

Following is a complete list of the winners:

Second round: R. Capstick, of Calgary won from L. S. May, Edmonton, 19th hole; L. Welliver won from C. L. Willis, Stettler; W. N. Graburn, Hanna, won from C. MacDonald, Lacombe; Joe Welsh, Red Deer, won from Julian Garrett, Edmonton.

Semifinals: Welliver won from Capstick; Welsh won from Graburn.

Final: Welliver won from Welsh, 19th hole.

J. H. Duckworth, Stettler, won from G. Duckworth, Stettler; G. L. Walker, Sylvan Lake, won from G. T. Jackson, Lacombe; Matt Mather, Castor, won from Herb Henderson, Lacombe, Dan Podersky, Edmonton, won from H. S. Northwood, Coronation.

Semifinals: Walker won from Duckworth; Podersky won from Mathier.

Final: Walker won from Podersky, 19th hole.

Second flight: F. O. Vickerson, Lacombe won from M. Johstone, Camrose; C. A. Fleming, Alsask, won from F. Roberts, Edmonton; Howard Emery, Edmonton won from C. A. Sneath, Lacombe; W. Wells, Bashaw, won from Joe Sherwood, Edmonton.

Semifinals: Fleming won from Vickerson; Emery won from Wells.

Final: Emery won from Fleming.

Second Flight: Dave Milne, Edmonton, won from H. S. Trame, Lacombe; J. H. Morrison, Lacombe, won from J. I. Mann, Edmonton; T. J. Dyke, Coronation, won from W. J. Shields, Wetaskiwin; A. Jensen, Coronation, won from Dr. Kennedy, Stettler.

Semifinals: Morrison won from Milne; Dyke won from Jensen.

Final: Morrison won from Dyke.

In the flight consolation finals, the winners were:

Championship consolation: H. Teare, Lacombe won from H. V. Johnstone, Camrose.

First flight Consolation: J. Duckworth, Stettler, won from K. McMurdo, Wetaskiwin.

Second flight consolation: F. D. B. Johnston, Calgary, won from T. P. Rcbarts, Edmonton.

Third flight consolation: Dr. C. D. Husband, Red Deer, won from D. McDonald, Lacombe.

K. McMurdo, of Wetaskiwin won the long driving competition, with a tee shot of 290 yards, while first prize in the approaching and putting event was taken by Herb Johnstone, Camrose.

Fourth flight: B. J. Densmore, Stettler won from Max Trimble, Lacombe.

Fourth flight consolation: J. M. Moxness, Camrose won from Nell McLeod, Coronation.

Rimbey News

Miss Mary Byers, of the Royal Alexandra Hospital, Edmonton, is spending a three week's holiday at her home here.

The log house and former dwelling on the farm of F. C. Kenner was destroyed by fire Saturday night, together with its fanning mill and a quantity of tools. A brooder had been placed in the building, and it is thought that the kerosene lamp exploded and started the fire.

Inspector Tucker, of the R.C.M.P., was in Rimbey on Thursday, July 6, looking over several buildings as a suitable location for police quarters. It is expected that a detachment of the R.C.M.P. will be stationed at Rimbey about September 1st.

On Sunday the Rimbey ball team with their supporters journeyed to Sylvan Lake, where they met the Eckville aggregation in a fast nine innings feature. A good crowd was in attendance and a close game followed, the final score favoring Eckville 6 to 4. Tommy Killian pitched a real game for Rimbey, and was given plenty of support, but the breaks seemed to favor Eckville.

The district southwest and south of Rimbey was visited by a hail storm on Sunday afternoon and again on Tuesday. The hail damage commenced west of Leedale and followed east to the Symonds district, losses running all the way from 80 per cent down. The hail was piled four inches deep on the north side of some of the buildings as late as Wednesday and gardens suffered considerably. Very little hail insurance was carried.

WATERS CLAIM FRED KIRSCH AS THEIR VICTIM

Thrown into the waters of the boating lagoon at Bowness Park, Calgary, Fred Kirsch, 18, of Red Deer, was drowned about 8:45 o'clock on Wednesday evening last week.

Firemen and first aid men worked over the body for almost two hours, but their efforts proved fruitless. At one time, hope for his survival was felt, but it faded as the workers labored. After viewing the body, Dr. George R. Johnson, coroner stated that an inquest would be unnecessary.

The accident occurred on the lagoon west of the boat house and opposite the dance hall. Kirsch and his companion, H. G. Asburn, both of the Signals in training at Sarcee camp, had just rented the canoe and left for a tour of the park waterways. In some unexplained manner, the canoe was overturned.

CARD OF THANKS

Mr. Ed. Sawyer and family, brothers, sisters and parents wish to extend their heartfelt thanks to all their many friends for the assistance and sympathy given them in their recent sad bereavement.

McPherson Verdict Is Unopular

Citizens of Province Expected a Clear Judgment From Justice Ford

The judgment handed down by Mr. Justice Ford in the case of Cora Lillian McPherson versus Oran Leo McPherson will necessarily arouse wide public interest of an entirely legitimate kind. The defendant is a Minister of the Crown. The Plaintiff is dependent for support upon public relief or charity, because of the occurences forming the groundwork of the action. The action itself was based on a claim that fraud had been practiced upon the Supreme Court of Alberta, and that the defendant had thereby obtained a divorce from the plaintiff. For all these reasons there was keen and proper public interest in the proceedings while the case was in progress, and corresponding attention will centre upon the finding.

The judgment is a lengthy exposition of law, which may be confusing rather than enlightening to the lay mind. But the gist of it is summarized in a sentence: "It is sufficient for me to say that on the appallingly conflicting testimony given before me, I am not satisfied that the action (for divorce) was presented and prosecuted by the plaintiff therein—the present defendant—in collusion with the then defendant—the present plaintiff—nor with Mather."

Wherefore Mr. Justice Ford declined to set aside the divorce or to order that Mrs. Cora McPherson be continued the monthly allowances that for a time was paid to her under an agreement which he thinks to have been "tainted with illegality" because "No one can take advantage of his own wrong."

The practical result is to leave Mrs. Cora McPherson without means of support, save such as may be provided by charitably disposed individuals or by the public provision that is made for the relief of persons in distress.

The Judge does not undertake to sort out from this mass of "conflicting testimony" the parts which he believes to be true or false. "No useful purpose," he says, "can be served by my stating what parts of the evidence I believe or disbelieve." That, as to elucidating the judgment rendered.

But on other considerations it is much to be regretted that a definite opinion on the creditibility of the evidence was not given. The effect of that omission is to leave all parties to the action and the court proceedings under a cloud; and public opinion to decide for itself who told the truth and who committed perjury in the witness stand.

His Lordship suggests that some allowance might be made to Mrs. Cora McPherson under the Domestic Relations Act, if an application were rendered. His present view of that matter, he says, is "If all the relevant evidence given in this action had been put before me as a judge hearing an action for divorce, I think I would have acted under section 23 of the Domestic Relations Act and made some allowance," to her.

That being the case, the Attorney General of this province might properly step into the situation now and enter action for such an allowance on Mrs. Cora McPherson's behalf. For after all this been said, a woman who has brought up a highly respected family of children, whatever her subsequent faults, should not at the decline of life be thrown into the street on the strength of evidence concerning which the judge says no more than that "I am not satisfied" that collusion was proved on the part of her husband. —Edmonton Bulletin.

ENDORSATION LACOMBE MILLING CO.

Recently I bought a sack of Pioneer Flour at the local mill, as I felt I should try out our home product, and I want to tell you I never had better results with any flour I ever used. It is light, white and as sweet as a nut, and I want you to drop in and sample a loaf, if you happen to be passing by the farm.

Respectfully,
Mrs. D. W. Garner,
Lacombe, Alta.

Recovery Plan is Needed in Canada

The Canadian Prime Minister is expected to return to Ottawa within the next few weeks. The paralysis which has overtaken the World Economic Conference makes a lengthy adjournment unavoidable. Before leaving for London, Mr. Bennett declared that if the conference failed to develop measures leading to general economic restoration this country would take separate national recovery action. It is quite possible that he had the Roosevelt example in his mind, for Canada is already benefiting to some extent from the effect of the Roosevelt policies.

Conditions in the two countries are not analgous in many particulars and Canada is not in a position to attempt certain of the domestic remedies already in operation across the border. The Dominion is dependent on the British market for her exports and unlike either Great Britain or the United States, she is a borrowing nation and must continue in that role for an indefinite period. Her monetary policies must be influenced to a great extent by external conditions over which she has little if any control. She must export the great proportion of her wheat. A greater percentage of her total trade than that of other countries is export.

One thing Canada can do and should do is to make a physical appraisal of her resources of materials, machinery and man-power in any plan of mobilization for external or domestic objectives. The great problem to be dealt with is that of restoring the country to its natural state of progressive development which has been arrested for some four years by external and unnatural causes. The prosperity which is seeping over the border is not enough to count on. The greater part of the profits accruing from higher stock market quotations and higher wheat prices is not going to the real producers of the country, and it is not affecting unemployment materially.

The return of Mr. Bennett should be signalized by a concerted effort on the part of governments, financial industrial and agricultural interests to promote complete recovery of Canadian business conditions. In other words, a miniature economic conference is in order. It could be held in Ottawa or in Banff or in any other designated spot, so long as economic planning on a comprehesive scale is initiated. The unsuccessful outcome of the conference in London precludes a policy of further drift.

Export trade has almost exclusively occupied the attention of federal administrations at Ottawa and the development of greater inter-provincial trade has not received the attention it deserves. It is plain to all that we are losing trade to foreign countries like the United States in our home market because of the lack of adequate competition from Canadian sources. If each province in the Dominion would display the same interest in the home markets for the products of its producers and manufacturers as, for instance, the United States does through its consular service and commercial agents, a broader market and enlarged output would be the result.

At present the United States is undergoing a complete process of industrial rejuvenation. Canada cannot afford to view this with unconcern. Canada must keep up with her big neighbor in industrial efficiency. The national recovery going on across the border at present can in some respects be duplicated in this country at a minimum of expense and without dislocation to business. The best brains of the country should be mobilized to aid the federal government in formulating a national recovery programme before next session of Parliament. —Herald

Blac falds New

With fine weather favoring the annual celebration and sports day at Blackfalds, a large crowd from the district and adjoining towns assembled at the ball park to watch the big tournament. Top honors went to Morningside. The first game in the draw was between Lacombe and Morningside, Lacombe being eliminated by a score of 5 to 4 in Morningside's favor. Blackfalds was the next winner in the tournament, beating Rimbey 6 to 4. The playoff was between Blackfalds and Morningside, Morningside winning by a score of 7 to 1. It will be remembered that Blackfalds beat Morningside by a like score a couple of weeks ago. A well attended dance in the evening wound up a perfect day of entertainment.

For Sale or Trade

Kitchen chairs; easy chairs; beds, complete; and other articles. Will trade for livestock or machinery, or sell cheap for cash. Apply A. L. Eby, (next to L. P. Minkler's residence).

FARMERS' FIELD DAY

Two Thousand Farm People From all Parts of the Province Spend Pleasant and Profitable Day at the Lacombe Experimental Station

"I am hoping to take back with me a fresh viewpoint of conditions in the West as a result of my visit through this part of the country," said the Honorable Robert Weir, Federal Minister of Agriculture, in an address before 1200 people on the grounds of the Lacombe Experimental Station, on the occasion of a meeting and picnic of the Alberta Shorthorn Breeders' Association, on Monday, July 17th.

The beautiful, well-kept grounds and buildings of the Farm were looking their best, and following a shower in the early morning, the day turned out an ideal one for such a gathering. The large crowd represented many parts of the Province, many coming a distance of nearly 300 miles. The time before lunch was given to visiting the grounds, buildings and gardens, which are of especial beauty and interest at this time of the year, and at 1:30 the crowd was seated under the trees where benches were provided.

F. H. Reed, Superintendent, of the Experimental Station, welcomed the visitors and called attention to some of the outstanding features of the farm work. Mr. Reed and his staff are to be congratulated on the excellent arrangements made for handling the huge crowd. Everything was done to make the visitors welcome and to make their visit enjoyable. There was no sign of confusion during the entire day.

W. W. Sharpe, Stettler, President of the Alberta Shorthorn Breeders' Association, officiated as Chairman and introduced the Hon. Alfred Speakman, Federal member for Red Deer, and the Hon. Irene Parlby, Provincial Member for Lacombe Constituency, who briefly expressed the pleasure at being present and of having the opportunity of welcoming Hon. Mr. Weir to Alberta.

Prov. Treasurer, the Hon. Mr. Reid, while introducing Mr. Weir, stated that since Mr. Weir's advent to office, there had been the best of co-operation between the Federal and Provincial Offices.

Hon. Mr. Weir, stated that his problem was much the same as with the individual farmer, that of quality production and marketing to the best advantage. Just at present his main effort is directed toward obtaining markets for the farmers' products. The high tariff prohibited shipments to the states and necessitated finding markets through the gateways of the West and East. He found the biggest difficulty had been in obtaining a definite idea as to what is available for export or available for consumption. He stressed the importance of producing the right type of bacon if Canada is to hold this market in the United Kingdom, and felt that experiments made on the various Experimental Farms of Canada would assist the farmers in arriving at a definite idea of what is wanted if they would take advantage of the knowledge. It has been predicted, he stated, that Ireland would disappear as a cattle producing country and Canada is the logical country to take its place in the world market. No limit is set on the money available to purchase sires of the highest quality for use in districts where it is difficult to obtain sire of a type desirable, and his Department observes similar policies in regard to other lines of livestock as well. They try to buy in each province, for use in that Province, any sires of the right quality and type, but it is sometimes necessary to buy from one province for distribution to another part of the Dominion. Mr. Weir advocated the dual purpose Shorthorn cattle and felt to breed cattle of this type constituted a challenge to any farmer. In his introduction of Dr. Barton, W. L. Carlyle, Supt. of Prince of Wales Ranch, said that within a radius of fifty miles there are more breeders of Shorthorn cattle than in any like area in the United States or Canada; that there are more Shorthorn cattle registered in this area than in any like area in Canada, and claimed this as the Shorthorn centre of Canada. He recommended the dual purpose cow as the best farmers cow.

Dr. H. Barton, Deputy Minister of Agriculture, was impressed on this trip with the variety of conditions which he observed. The picture he had obtained over the route was one of diversified agriculture, and he found that much serious thought was being given to quality of production, but there are still large areas in this Western country which could well be developed by use of the Shorthorn dual purpose cattle.

J. W. Durno, Field Man for the Alberta Provincial Shorthorn Breeder's Assn., when called upon to introduce Dr. E. S. Archibald, Director of Experimental Farms for the Dominion, expressed the hope that the small herd now at the Lacombe Farm would prove the nucleus of one of the outstanding herds in the West in a few years.

"The man who is a good feeder, a good breeder, a good operator of his soil, a good selector of cereals and forages, is a good farmer," said Dr. Archibald. He spoke of the invaluable aid to the Farmers of the experiments carried on by the Dominion Experimental stations, and complimented Mr. Reed and his staff on the excellent condition of the institution here.

Following the addresses a parade of the livestock was held, led by Chas Duthie with four pure-bred Clydesdale geldings, there being some 42 head of horses and 25 head of purebred Shorthorn cattle, and the crowd then repaired to the Judging ring where G. E. Day, Secretary of the Dominion Shorthorn Breeders Association and J. W. Durno conducted the judging contests, and Mr. Day pointed out deficiencies in the animals shown, and described the qualities desirable in the perfect type of animal.

W. W. Sharpe expressed the appreciation of the Association to the staff of the Experimental Farm for courtesies shown, following which many accepted the invitation of Mr. G. E. DeLong, Assistant Supt. to drive about the Farm and inspect other features, such as the Poultry, Swine, Forage Crops, Rotation plots, etc.

A pleasant feature of the program was the presentation to the Hon. Mr. Weir of a cane, by Mr. Cameron Fraser, Mr. Fraser being introduced by Mr. J. N. B. MacDonald, Proprietor of the Lacombe Nurseries.

Five Injured as Cars Crash

Colliding with the Calgary to Edmonton bus, southbound from Ponoka, three miles south of Ponoka shortly after 6:30 p.m. Sunday, A.P. Austin, driving a 1932 Chevrolet car, suffered minor injuries while two women from Calgary, passengers, were taken to the Lacombe Hospital with severe cuts and other injuries believed to be serious. A baby riding in the car was uninjured. K. McKenzie another passenger was badly cut about the head but was not held in hospital.

Austin, driver of the car, is from Ontario, and his car carried an Ontario license plate H-5674.

The bus which arrives in Ponoka at 6:20 p.m. had proceeded south three miles when it turned out to the left side of the road to pass a car and truck which were parked at the side of the road with tire trouble. Just at this point Austin's car came over the hill about 100 yards ahead and, seeing the bus on the side of the road endeavored to pull over to the other side. In doing so it collided with the front right-hand side of the bus.

The bus is said to have been travelling at a speed of 10 miles an hour and in second gear.

The front of the Ontario automobile was completely demolished while the bus received a broken axle, a crumpled fender and a punctured tire.

Including Austin, four women, two men, and a baby were in the Ontario car. One woman was unconscious and badly cut about the head and face and a second woman suffered a dislocated ankle and cuts about the head. Minor cuts were sustained by others in the car, but only the two were held in hospital, the others going on to Edmonton.

The occupants of the car were: Mr. and Mrs. K. McKenzie, Edmonton; Mrs. Cakebread, Calgary; Mrs. Mossett, Calgary; the driver Austin, and a child.

HEALTH CLINIC AT LOCKHART.

The Red Deer Health District will hold a clinic for the examination of adults, babies and pre-school children in the Lockhart Community Hall on Thursday, July 27th, from 10:30 a.m. to 4:00 p.m. Vaccination will be done if desired.

Quality That Is Unsurpassed

"SALADA" TEA

"Fresh from the Gardens"

Canada And Its Foreign Born

Because of the many uninformed and therefore inaccurate statements frequently heard to the effect that the population of the three prairie provinces of Canada are largely of foreign birth, a recent census bulletin issued from Ottawa, and based on the last census (1931), is of interest and value.

It is revealed that out of a total population of 2,353,529 in the three provinces, 1,808,574 are of British birth, and 544,955 of foreign birth, and of those born under the British flag no less than 1,492,657 were born in Canada.

But, it is frequently argued, these figures do not give a true picture of the racial division of our Western population inasmuch as many of those born in Canada were born of parents who themselves were foreign born and their children, although born in Canada are, to all intents and purposes, the same as if born in foreign lands. While in many cases, probably most cases, this assumption is not a sound one, the census bulletin recently issued is of particular value in that it classifies the parentage of the entire population.

It is shown that the population of the three Western provinces having both parents born in Canada numbers 550,456; having both parents British born outside of Canada 517,403; having one parent Canadian born and the other British born 145,176. That is, 1,213,035 or more than one-half of the total population are at least second generation Canadian or British born. To these may be added another 191,509 where one parent is either Canadian born or British born, while the other is foreign born.

Contrasted with this is the population born of parents both of whom were foreign born. Their number for the three provinces is 845,725. Subtracting, therefore, the total foreign born of 544,955 from this figure, we find that the number born under the British flag, and mainly in Canada, of foreign born parents is only 400,770. These are first generation Canadians.

The figures are not only interesting but reassuring to those who are anxious that Canadian and British blood, customs and ideals shall predominate in this land. Another reassuring and gratifying fact is indicated by the figures that 191,509 of the population in these three provinces are the offspring of marriages contracted between Canadian born or British born men and women on the one hand with foreign born on the other hand. This inter-marriage between the races is bringing about the development of a distinctly Western type of Canadian, and one that gives promise of being a very fine type, physically strong, mentally alert, uniting in themselves the Anglo-Saxon love of liberty, respect for law and authority, capable in government, with the love of music, poetry, art, and handicrafts which characterizes the peoples of continental Europe.

Coincident with the publication of this recent census bulletin, Hon. C. H. Cahan, Secretary of State at Ottawa, issued a warning to judges within whose jurisdiction falls the duty of naturalization of aliens to exercise care in the performance of such duties. He drew attention to the danger of certain malcontents applying for naturalization solely in order to protect themselves from the danger of deportation, or, in other words, seeking Canadian citizenship not out of love for Canada, or to advance Canadian interests, but in order to secure for themselves greater freedom in undermining Canadian laws and institutions.

And a Saskatchewan judge, commenting on the same subject, is reported in the daily press as urging the Federal Government to see to it that applicants for naturalization are supplied with literature which will enable them to learn something about Canada. Some assistance, he said, should be given to those who wish to become Canadian citizens.

Canada has probably been somewhat careless in the freedom with which citizenship has been conferred upon alien residents in the past, and negligent of its duty to these people. All too frequently naturalization has been obtained solely in order that patent to homestead lands could be secured. Other thousands have taken out citizenship papers in order that they may vote, but possibly without any very intelligent idea of what the duties of true Canadian citizenship really involve.

Five years residence in Canada will not in itself make a Canadian citizen. Ability to read and to write does not in itself constitute intelligent citizenship. The mere possession of naturalization papers, while it does make a man or woman a citizen in the eyes of the law, does not necessarily make such person a citizen of Canada in the true meaning of the word "citizen."

It should be a matter of national policy to inculcate right ideas and high ideals in the minds of all newly created citizens. To that end it would seem that something more is required than so many years residence and the taking of the oath of allegiance on the one hand, and the handing over of a piece of official paper by the Government on the other hand. There should be some formal ceremony at which the vital significance of becoming a citizen of Canada would be emphasized.

We believe these new citizens would themselves welcome some such procedure. The vast majority of them have acquired a real love for Canada. They adopted it as home, and desire to make it that not only for themselves but for their descendants. They are anxious to serve Canada, to make it better and grander. They would like advice, inspiration and guidance. The State should provide it.

Outlay Not Only Thing

Much More Goes Into Making and Keeping a Home

Everything worth while costs something, although there may be no label on it. A home costs something. First of all, the house and furnishings mean a big outlay. Then there is love, forbearance, helpfulness, and sacrifice—things that make a house a home. When we consider the cost of a home, how careful we ought to be not to do anything that would interfere with its happiness. Nor should we think only of our own home; are we not also responsible for the well-being of the homes of others?

Invited To Conference

Kingston, Jamaica.—The Canadian government has been invited to send delegates to a trade conference this summer of representatives of the various British West Indian colonies. Among the questions to be dealt with will be the growing and marketing board of the vegetable and fruit crops of the colonies.

The state having the greatest number of horses on farms is Iowa, where the horse census shows more than a million.

Seed Grain Clubs

Alberta Organization For 1933 Shows Large Increase

Organization of seed grain clubs in Alberta for 1933 reveals a large increase over 1932, or in any year since the work began, 100 seed grain clubs with about 1,400 members comparing with 73 clubs and 1,000 members in 1932. Of these there will be 42 wheat clubs with a membership of 650, including 11 Reward wheat and 31 Marquis wheat clubs. The oats clubs will total 28 with a membership of 400, while there will be 20 alfalfa clubs with a membership of 200. Barley clubs will total seven, and there will be three or four corn and potato clubs with about 50 members.

He (at 11 p.m.)—"Did you know I could imitate any bird you can name?"

She—"No, I didn't. Can you imitate a homing pigeon?"

Finland will push its large public works program this year.

Any Looseness of the Bowels Is Always Dangerous

When the bowels become loose and diarrhoea, dysentery, summer complaint and other bowel troubles set in, immediate attention should be given and the discharges checked before they become serious.

To check these unnatural discharges there is a remedy in Dr. Fowler's Extract of Wild Strawberry, a remedy that has been on the market for the past 88 years. It is rapid, reliable and effective in its action. A few doses is generally all that is required to give relief.

Get it at your drug or general store; put up only by The T. Milburn Co., Limited, Toronto, Ont.

DR. FOWLER'S EXT. OF WILD STRAWBERRY

Spends Holiday In Canada

President Roosevelt Has Summer Home In Bay Of Fundy

Franklin D. Roosevelt, President of the United States, will this year spend part of his summer holiday in Canada—on the island of Campobello, New Brunswick, situated in Passamaquoddy Bay, in the Bay of Fundy. For several years Mr. Roosevelt has visited Campobello; in fact, he has had a summer home there since 1905, and his mother has maintained a small estate on the island for more than 30 years.

Campobello is an island eight miles long and one-and-a-half miles wide at its widest part. One point of the island is only a stone's throw from United States territory—the coast of the State of Maine, while the Canadian mainland is a two hours' sail distant. There are few all-the-year-round residents on Campobello. Most of the homes are owned by citizens of the United States and are used only during the summer.

Though Campobello is comparatively little known it has a historic background. The original settlement was established in 1767 by a British naval officer, Captain William Owen, father of Admiral Owen, after whom the town of Owen Sound, Ontario, was named. The name of the island was originally Passamaquoddy, but it was given its present name in honour of Lord William Campbell, Governor of Nova Scotia about 1770. The name Campobello was given by Captain Owen, partly as a complimentary punning on the name of the governor and partly because it describes the fine appearance of the island. Under the Convention of 1817 this island, as well as Grand Manan and Deer Islands, the former south of Campobello and the latter north of it, were assigned to Canada. The United States had claimed all three.

Benedict Arnold lived for sometime on Campobello after his career in the American War of Independence, though he died in London, England.

Cleared Highway Of Stones

Nova Scotia School Girls Proved Themselves "Public Spirited"

In a letter from Neil's Harbor to a Halifax paper, the writer says he believes women are more "Public Spirited" than men. He says:

"It has been brought to my attention quite recently that the school girls of this district turned out and cleared stones off the highway in the village of New Haven. The main highway passes close to a beach. During the storms this winter, the sea threw up a quantity of stones along with wreckage of wharves, fish houses and boats in across the highway. After the storm abated a gang of men was sent to work. They cleared away the wreckage, but did not remove the stones.

"Maybe those in charge of the road intended to leave them there and gravel them over However, they were left there for some reason unknown to the long-suffering public, who had to walk over them day after day, as they lay directly in the road to the general store and to the fishermen's landing dock.

As time passed on nothing was done about it until one afternoon the school girls were noticed at work clearing them away. The result of the first attempt was a foot path through the middle of the road, and the next afternoon they turned out and completed the job and made it possible for a car to get by."

Cyclones Originate In the Stratosphere

Belgian Professor Proves Contention In Lantern-Slide Lecture

The stratosphere gave up secrets about cyclones in a scientific lantern-slide lecture at Chicago by a brilliant young geophysicist from Norway.

From data collected by sending ballons bearing thermometers nearly seven miles into the upper stratosphere above Belgium, Professor Jacob Bjerknes of the Geophysical Institute, Bergen, Norway, determined for the first time what actually happens in the upper air during destructive wind storms.

Professor Bjerknes' theory, supported by his unique tests, is that the stratosphere, or lower limit of the stratosphere, buckles up when an area of cold air moves into a region of warmer air. It is that battle between air of different temperatures that causes what ordinarily are called cyclones.

It is hoped that from the experiments more accurate predictions can be made about the course and extent of any cyclone.

Nine mounted guns, relics of the World War, have been sold by New Zealand to Japan as "scrap iron." New Zealand explaining that it had no appropriate place to keep them.

Profits of the Australian National Bank last year were greater than in 1931.

STAIRS MADE HER GASP FOR BREATH

Penalty Of Excess Fat

Although she has lost but 7 lbs. of her overweight, this woman finds that 7 lbs. has made a remarkable difference to her. There can certainly be nothing wrong with a reducing treatment that brings such increased energy and vigor.

Her letter reads:—"I am 53 years old and my height is 5 ft. Last year I weighed 154 lbs. For six months I have been taking a half-teaspoonful of Kruschen Salts, making no change in my diet. Now I am less round the hips, and only weigh 147 lbs. dressed. But I feel lighter and can now run upstairs, which before used to make me gasp for breath. Everyone says how well and fit I look, as I am in a store and get no walking exercise at all. The results may not be startling, but the fact remains that I feel much better than of late years—not so heavy—and I now enjoy dancing."—(Miss) J. H.

Kruschen is based on scientific principle—it's an ideal blend of 6 separate minerals which help glands, nerves, blood and body organs to function properly and maintain a splendid degree of health—it builds up energy and strength all the while you're training yourself down to a point of normal weight.

Japan's Pearl Crop

Planting Of 40,000 Acres Of Waters Largest In Years

The pearl plantings in Japan this year, in contrast to most crops, will be the largest in years. More than 40,000 acres of quiet waters have been sown with more than 3,000,000 pearl oysters, and thousands of people are employed. The pearl crop being planted now will not be harvested for seven years.

Millions of seed pearls or tiny bits of mother of pearl, are skilfully inserted into living oysters for the pearl crop. The oysters slowly proceed to cover these irritants with a secretion which transforms them into pearls. The oysters are placed in steel cages and suspended a few feet above the floor of the sea from great rafts. Twice a year they are brought to the surface, cleaned and treated, to prevent disease. Some 60 per cent. of the oysters bear fruit, but only about five per cent. are marketable.

The annual crop is valued at several million dolars.

May Be Hereditary

Doctor Finds Some Eskimos Are Getting Back Extra Rib

The male of the species, among the Eskimos at least, seems at last to be getting back that extra rib that Adam is said to have lost when Eve was created. Dr. T. D. Stewart, the Smithsonian Institution announced, has found that the "lost rib" is coming back among some Eskimos. They have 25 ribs instead of the customary 24. Return of the 25th rib apparently indicates that evolution is still at work in the human race, the institution said. The 25th rib is giving more chest and abdomen space to individuals in which it appears. The extra rib may be hereditary. Some indication of this is seen in the fact that practically all of the 25th ribs are found among males and most of them grow among Eskimos living north of the Yukon River. Dr. Stewart has found the extra ribs in about 12 per cent of 200 Eskimo skeletons from Alaska that he has examined.

Records Will Be Valuable

Data Tells Story Of Twentieth Century Civilization

Vast record of present day life and culture is being assembled at Denver, Colorado, to be preserved for information and comparison in future centuries. Secure in copper boxes and enclosed in sealed vaults, 2,000 books and other records gathered in the last ten years will tell the story of the Twentieth Century civilization when opened at intervals of 200 years. The first opening is set for the year 2131 A.D.

Empire Telephones

Empire telephones made another step when service betwen India and Australia was inaugurated. A short time later, Egypt, Palestine and South Africa were linked to India. Since the service between India and England was started on May 1 an average of five calls a day has been made from Bombay.

Declares War On Slums

Great Britain Starts Five-Year Drive Against Hotbeds Of Disease

Great Britain has declared a five-year war to the finish on her slums.

Tumbledown alley dwellings, basement caves and insanitary "backto-backs"—hotbeds of tuberculosis, rickets, anemia and other diseases—are slated to be wiped out.

The government's move against the plague spots as motivated by the prevailing low building costs and low rates of interest on money, together with a desire to ease the pinch of unemployment.

To insure immediate action the minister of health has called upon all housing authorities in England and Wales to submit by Sept. 30 a series of programs drawn on the basis of clearing all such areas by 1938.

Each program is to include a list of the areas in each locality, the number of houses to be demolished, the nuber of inhabitants affected, a list of areas where improvement by reconditioning is necessary and time tables for complete clearance, improvement and rehousing of the displaced dwellers.

"The time limit is the very essence of this program," says Sir Edward Hilton Young, Minister of Health. "The time limit must, of course, give reasonable time for the work, but it must be fixed, and fixed absolutely."

No one knows the complete extent of the slum problem in the land, though the estimate generally given is that 1,000,000 dwellings must go deadline for the programs from every area.

An up-to-date picture, however, will be available by Sept. 30, the deadline for the program from every area.

The great mass of the slum dwellings is more than a century old, harking back to the era of quick industrialization of the country when houses sprang up like mushrooms around the factories.

But the problem is not limited to the cities, unhealthful conditions flourish in many villages and these, too, are on the books for destruction.

Among cities, the slum evil is general and is regarded as being at its worst in the industrial and mining areas. Liverpool, Manchester, Birmingham, Leeds, Bristol, Hull, Sheffield and scores of other cities have sordid, insanitary sections.

London, because of the great population crammed into a relatively small area, presents a problem of its own and it is believed that the five-year grace period may have to be lengthened for abolition of the sore spots.

In the wake of the government's determination on action, a lively campaign is being pursued by the press to keep the spirit for wholesale and immediate reform at high pitch. The Archbishops of Canterbury and York have penned vigorous appeals and the Prince of Wales who knows great areas of the slums by periodic visits, has voiced the support of the royal family.

Used To Thunderstorms

So Common In Java People Do Not Notice Them

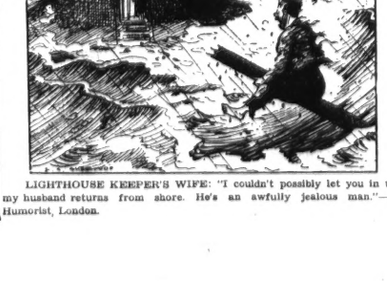

In Java thunderstorms are so common no one takes any notice of them. Many hundreds of thunderstorms, often sevetre ones, are experienced in the rainy season. For several months the sound of more or less distant thunder scarcely ever ceases, and it is only when there is a terrific crash right overhead that folks are conscious of the sound. In fact, the people of Java are so used to hearing thunder for a good part of the year that only when the storms cease do they realize that they have been living in a perpetual uproar.

Conscience Fund Grows

The "Conscience Fund" at the U.S. Treasury Department has crawled up above $600,000, which just goes to show that some people insist in being honest. The Federal Government has had a conscience fund since the days of President Madison. It was started by a fellow who had defrauded the U.S.A. of $5.

The Niagara Gorge, which is sometimes called the "geological clock," is about 25,000 years old.

The bay of Fundy covers an area of approximately 8,000 square miles.

Another Kind Of War

Boycott Severs Trade Relations Between Latvia and Germany

That great German Reich and the very small republic of Lafvia are indulging in a certain kind of war. Each has established an embargo on all imports from the other.

It began very unofficially when certain Latvian citizens decided to boycott German goods and German merchants as a protest against Hitlerism. Germany took official notice by barring Latvian butter. Latvia took the next step, a very official one, by barring all imports from Germany; and Germany made the thing complete by putting up bars against all Latvian trade.

At first glance it appears that little Latvia must be the greater sufferer. Her exports are almost wholly agricultural, and Germany has been her best customer. But on the other hand Latvia imports nearly all her manufactured necessities, and in the past has purchased most of them in Germany.

Neither nation is likely to suffer very seriously but Germany will really lose more than Latvia. The German gesture of brow-beating a small state for the offense of an unofficial boycott is similar in principle to the Japanese "punishment" of Shanghai for boycotting Japanese goods. It is far from heroic.

Five Years Without Rain

People Of Shenshi, China, Are Dying Of Starvation

Farmers who cry for more rain although it may have been only a matter of days or weeks since there was a downpour, should be thankful the chances of birth did not bring them into the world in the province of Shenshi, China. There, there has been no rain for five years. Normally, it is a fertile land, one of the richest agricultural territories in the country, and peopled by men and women of fine physique and steady industry.

Today they are starving. They have no crops or live stock to speak of. They have died by tens of thousands of starvation. They live remote from railways and other means of transport and from ordinary communications. They have suffered and died in silence in the hinterland of a country that is almost too vast to comprehend.

Five years without rain! Think of that. We're not so ill off after all.—St. Thomas Times-Journal.

Latest Soil Thief

"Snowdrift-Erosion" Lowers Wheat Yield According To Report

"Snowdrift erosion" is the latest soil thief discovered by the Department of Agriculture. Occurring principally in the North-west the erosion is reported to have lowered wheat yields in that section. For a wheat crop, says Government experts, it is the common practice to furrow the land in the fall and crop it the next spring. The trouble comes because the snowdrifts form on leeward slopes in winter and at the spring melting carry away the loose, recently ploughed soil. The phenomena is worst on northern slopes because the drifts are deepest there and the soil is not frozen when snow on top melts away.

Depends On Viewpoint

The wise holiday-maker is he who refrains from turning glutton and crowding so much into his few brief days away from business that when he returns the routine of it becomes an intolerable monotony. This work-a-day life is not at all monotonous if we regard it rightly.

A Drastic Antidote

As the result of experiments conducted by Dr. W. B. Kouwenhoven, professor of electrical engineering at Johns Hopkins University, Baltimore, Md., it has been discovered that an electric shock of high voltage is an antidote for an otherwise fatal shock from low voltage.

There are 1,200,000 bricks and 70,000 tons of cement, chalk and sand in Europe's largest chimney, located at Charlottenberg, Germany.

The Queen of Norway recently purchased three English hunting horses.

Combatting Disease

Death Rate From Diphtheria Is Lowered In Manitoba

Ten years ago the diphtheria death rate in Manitoba was 21.5 per 100,000, which meant that 150 children lost their lives in this province every year from this preventable disease. In 1923 immunization was started in Winnipeg, with the result that by 1929 the death rate for the whole province had been brought down to 10.3. In that year immunization was extended to parts of rural Manitoba, resulting in a further reduction of death rate to 5.2. In rural Manitoba since 1930 there have been 63 deaths in unimmunized territory and only 18 deaths in the much larger population of the immunized territory. There have been no deaths among immunized persons.—Winnipeg Tribune.

Wages Being Increased

New Westminster Lumber Mill Also Employing More Men

An increase of 10 per cent. in wages, affecting 750 men, has gone into effect at the Fraser Mills plant of the Western Lumber Co., Ltd., New Westminster, B.C.

The increase follows a better demand for lumber and an increase in price. The Fraser Mills plant is turning out a quarter of a million feet of lumber daily and the shingle mill is working double shift. Employment at the plant has increased from about 450 men to 750 since last winter.

While the bulk of lumber shipments are still going by ship cargo, the demand for rail shipments is increasing.

A Comfortable Margin

Population Of New York Nearly Million Behind London

The population of New York City according to a census by the New York Merchants' Association is now 7,218,000. This still leaves London the world's greatest city by a comfortable margin, its 1932 census showing a population of 8,202,818. Next to New York comes Berlin, with over 4,000,000, then Chicago with 3,376,000. There are eight cities in the world with a population of more than 2,000,000, and thirty-one with more than 1,000,000.

Church Held Out Well

Mr. A. C. Marts, prominent business man of New York City, has pointed out that during the past three years in the United States "one out of every six banks has been closed, one out of every 22 business and industrial firms went into bankruptcy, one out of every 40 colleges have been closed, one out of every 45 hospitals closed, but only one in every 2,344 churches has been abandoned."

Commission To Handle Wheat

Bucharest, Roumania.—The Roumanian government has decided to set up a purchasing commission to ensure a remunerative return to its wheat farmers by buying large amounts of the cereal at a price fixed by the administration.

Valuing Your Friends

You must value your friends for what they are, overlooking what they are not, remembering that they must care for you in that same fashion if they care for you at all.

The heavy influx of tourists is boosting business in Italy.

Scientists Assert That Extremes Of High Temperatures Will Mark The Summer Of 1933

If vagaries of summer weather to date have not been sufficient to bring conviction that extremes of high temperature will mark the season, it may be added that science—to the extent that it ventures opinions upon such subjects—agrees with the popular view that this summer is to be extraordinarily hot.

The reason given by the supposed experts, if accepted without too much critical examination, is fairly simple. We may expect a good number of hot spells, they declare, because less cold air is going to move in this direction than has arrived in other recent seasons. The full explanation is a trifle more involved.

Heat in any region is produced by three causes: the direct effect of sunlight; drift of hot air from place to place, and by the way air masses are warmed through the increase of pressure when descending from higher atmospheric levels. This third variety of heat is the same as that produced when air is compressed inside an automobile tire. The first extreme heat wave here this year, the meteorologists report, was caused by movement of air northward after it had become over-heated through such a process of descent and compression in the area about the Gulf or Mexico.

If we are to guess about future weather, though, we must return to consideration of the sun; for it, after all, not only generates heat but is also the chief force in compressing air and moving it, whether cold or in a heated state. An interesting factor this year is that the sun is expected to generate an increased amount of heat, because the number of sunspots is on the increase and, contradictory though it may seem, the more blemishes there are on the sun the more heat it emits.

But this heat, to continue with the meteorologists' tale of contradictions, ordinarily brings cool weather in this area, for the warmth becomes transformed into solar energy, stirs the atmosphere and brings large gusts of cold northern air in this direction. There is, however, the settlement of time lag connected with this solar energy, since it works largely through heat storage in the ocean. Immediate wather conditions show a tendency to correspond with solar conditions of six or eight years ago. In the solar period which will control our weather this year, according to the scientists, sun energy was on the decrease and, as a result, we are now in a time of decreasing atmospheric circulation. That means, if they are right, what was said in the first place; less cold air is coming this way.

All of which, it is to be feared, leaves guessing about the weather almost as dangerous a game as in the past, even though the scientists, like the earlier weather prophets, who spoke in simpler terms, seem confident that the secrets of nature are growing less and less secret to them. But if it is a hot summer, don't forget we told you so. Or the scientists did.—Toronto Evening Telegram.

Saskatchewan Butter

Creamery Butter Output During May Shows Increase

Creamery butter output in Saskatchewan during May shows an increase of 54,752 pounds over April according to figures released by the dairy branch of the department of agriculture for Saskatchewan. This is an increase of 2.9 per cent. As an indication of the return of the southern section of the province to its former position, May figures showed an increase over the production figures for the same month last year.

For the first five months of the year the creameries report a total butter make of 6,101,728 pounds, which is practically the same as the figures for the same period of 1932.

Passing Of the Skyscraper

Population and industrial trends indicated in the census reports are now recognized by one profession particularly affected. William Orr Ludlow of the American Institute of Architects sees the skyscraper era at an end and the time of smaller cities, widespread surburban communities, and decentralized industry at hand.—New York Evening Post.

Old Rule Proved Wrong

The old rule that grain for pigs should not be ground too finely seems to have been dealt a severe jolt by recent findings of Professor Sinclair, as reported to the Alberta Farmers Field Day at the University of Alberta. Finely ground grain brought faster gains than either medium ground, coarse ground, or whole grains fed to pigs at Edmonton.

More women of Italy insist on wearing foreign shoes than ever before.

The upturn was inevitable. When people get their backs to the wall they begin to face things.

The latest definition of a go-getter is a fellow who runs out of gas three miles from a service station.

Wheat Marketings Heavy

Nearly Million Bushel Increase Over Corresponding Period Last Year

A substantial increase in wheat marketings in the prairie provinces during the crop year to date is shown in a report issued by the Dominion Bureau of Statistics.

The marketings amounted to 352,176,562 bushels compared with marketings of 257,017,912 bushels during the corresponding period in 1931-32.

Marketings by provinces are as follows, with figures for the same period in 1931-32 given in brackets: Manitoba, 36,192,059 (24,129,619) bushels; Saskatchewan, 178,413,185 (114,979,752) bushels; and Alberta, 137,571,318 (117,988,541) bushels.

From August 1, 1932, to June 23, 1933, export clearances of wheat amounted to 209,592,939 bushels, compared with 153,899,225 bushels for the corresponding period in 1931-32.

Clearances from Montreal totalled 60,572,993 bushels as compared with 45,601,444 in the same period a year ago; Vancouver, 88,283,487 bushels this year; 69,667,475 last year; Victoria, 1,847,752 against 224,000 a year ago; Prince Rupert, 976,480.

Shipments from United States ports aggregated 25,107,000 bushels compared with 30,041,000 for the corresponding period of 1931-32.

Radio Station Moved By 'Plane

All Northland Is Now Linked With Outside World

An entire radio station and all its delicate etquipment has been moved by air from Lindsley Bay to Cameron Bay by Royal Canadian Corps of Signals with the co-operation of the Canadian Airways.

The station, equipped with both short and long-wave apparatus, is functioning satisfactorily, it is stated. It is the first time on record such a feat has been accomplished.

Captain Stuart Hasting, commanding officer Royal Canadian Corps of Signals, announced every strategic commercial centre in the northland is now in touch with the outside world. Two standard radio stations, erected by the Dominion government at Fort Rae and Fort Chippweyan, have commenced operations.

China Gains Morale

Pride May Have Started Welding Of Chinese Unity

China has surprised the world and very likely herself by refusing to follow up the Japanese truce with a civil war of her own. Only a few weeks ago, when Tokyo's armies were sweeping over North China, people said that there would be no peace with Japan because no party in China could make such a peace and stand up against the wrath of the Chinese people. But the Nanking Government signed a truce which seems to have found general acceptance in the country.

The hammer blows of the Japanese invader may thus have begun the welding of Chinese unity. Japan's case before the world is based chiefly on the contention that China is not a nation but a riot. That charge may well have pierced through the crust of factional and personal selfishness to the core of Chinese pride.—New York Times.

Injure Chilean Trade

British Restrictions Force Ranchers To Slaughter Sheep

British restrictions on meat importations have forced Chilean ranchers to slaughter 225,000 sheep from which the only marketable product they obtained was tallow.

Ordinarily almost all the sheep raised in this region are exported to England. Meat importations into the United Kingdom from non-Empire sources were restricted in the Ottawa trade agreements.

From His Standpoint

When Mose was told that poor Rastus had been shot dead by Judge Hicks while he was stealing the judge's chickens, he merely replied: "Oh, well, it might have been worse."

"How could it hav been worse?" indignantly asked the informant. "Poor Rastus dead! De jedge just nachully blow de head right off of him. What could be worse dan dat?"

"It might have been worse," replied Mose, "if de jedge fire off de gun de night before, he might have blown de head off of me!"

A Novel Propsal

Headlights on sheep is a novel proposal put forward by J. N. Corbett, Montana rancher. A few animals wearing collars fitted with a flashlight battery and a red reflector on the lamp, he claims, will protect a band of several thousand sheep from slinking coyotes and raiding cougars. He finds the light does not bother the sheep.

Beer was regarded by the Egyptians of 4,000 years ago as one of the most popular medicines, declare European archaeologists.

Buildings In Miniature

Young Man Kept Busy Creating Models For Architects

Houses of cardboard and casein, of matches and skewers, of plaster and pigment, built on a drafting board with safety-razor blades and paper punches and old knives—that is the daily work of Al Allard, a young minneapolis man.

Al Allard's interest in midget buildings dates from that Lon Chaney movie, "The Phantom of the Opera." Taking a tip from the miniature sets which were an important part of the picture, this handy young man built his first model, patterned after one of the castles used in the film. By contrast with the intricacy of detail which he has since developed and achieved that first affair was rather simple and inexpert. But at least it was a start, the first of several score of models that have sprung from his work table. Chartered by the manager of the theatre where Allard worked and exhibited in a department-store window as part of an exploitation "gag," the little castle attracted much attention. It was brought to the attention of a Hollywood studio executive visiting Minneapolis. Critically the executive examined the little castle and promised to get in touch with Mr. Allard on his return to Hollywood. This he failed to do, but the miniature builder's enthusiasm and ambition had been fired.

Into the life of Mr. Allard burst a St. Paul architect burgeoning with a problem. "Listen," commanded the architect, "I'm trying to 'sell' a committee on the design for a new church, but they can't get together on it. I think if I had a model to show them they would like the design. I'll give you three weeks to finish the job and you can name any price within reason."

Night after night he toiled over the little church, fitting in every beam and brick. The architect got the contract!

His experience as a creator of these little houses, castles and cathedrals has not only shown him the way to achieving distinctiveness and the appearance of reality, but has also been an instructor in many of the fundamentals of architecture and has developed in him his own credo of philosophy of this craft.—Progress.

Wonders Of Modern Telephony

Are All Assembled At New Exchange In London, England

The Prince of Wales recently opened the telephone exchange of the world at the new Continental headquarters of the General Post Office in London, England.

Secret apparatus which makes these premises the most efficient telephone exchange in the world was demonstrated to the Prince during his tour. Every country on earth that wishes to make a call by radio telephone to another country has to speak by way of the amazing silent room in Faraday House. The Prince was shown how the business man in New York who wants to talk to the business man in Australia is connected through London. During the demonstration it was shown how it is possible to talk to every country in the British Empire from one telephone instrument within the course of an hour.

On the staff are telephone operators who, although English and in London, spend their entire day talking foreign languages. These are the girls who deal with the huge volume of calls coming in every minute from all the capitals of Europe.

The most up-to-date system of checking the time subscriber's talk has been installed, and in front of every telephone operator is a lighting system which denotes each minute that a line is engaged.

The room in which most of these wonders of modern litelephony are assembled is as silent as any room occupied by two hundred people can possibly be. By an elaborate scientific system of deadening noise it is almost impossible to hear the operators' voices, even when they are busily engaged n talking to all quarters of the globe.

Stainless Steel Train

Contracts have been completed for the construction of a stainless steel train for the Chicago, Burlington and Quincy Railroad, capable of travelling 120 miles an hour. The train will comprise three cars built as an articulated unit, powered by a Diesel electric motor, and will be ready for experimental service in actual public use this fall.

Hint For Housekeeper

"Families that use only a small amount of bread find that a portion of each loaf becomes stale. To avoid this, try cutting the new loaf through the centre, and use the bread from each cut side. When not required, place the two cut edges together and wrap in wax paper. The bread will remain fresh and moist for days."

"So Jane married that famous X-ray man."

"Yes; I wonder what he can see in her?"

Deposits in the post office and trustees savings banks in England increased more than $108,000,000 last year.

Winnipeg Newspaper Union Fashion

By Ruth Rogers

766

SIMPLE, SMART, TREMENDOUSLY WEARABLE

It's slenderizing too.

So many materials are suitable for this model. It only rests with your own particular needs.

For instance, if you want it for town or office, then a novelty checked soft crepe silk in the favoured blue and white is a very smart medium.

For a little later for warm summer days, printed sheer linen in red and white with white organdie trim is dainty and cool.

Another lovely suggestion is a woolly type rough cotton that is playing a big part in fashion for summer. A diagonal striped effect could be worked out very attractively.

Pattern also provides for long sleeves.

Style No. 766 is designed for sizes 16, 18, 20 years, 36, 38, 40 and 42 inches bust.

Size 36 requires 3¾ yards 35-inch with ⅝ yard 35-inch contrasting.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Protection For Aviators

If Carrier Pigeons Accompanied Them On Lonely Flights

Experiments with pigeons have been carried on for two years by David Staig, airman, of Melbourne, Australia. He claims now that every aerodrome should have its own pigeon loft from which airmen should take pigeons on all flights over sparsely populated country. The pigeons, he contends, if released when a machine had a forced landing, would immediately fly home with a message and no difficulty would be experienced in rescuing the lost flyer.

Peru has a new retail sales tax.

Publisher Picked Good Men

Cyrus H. K. Curtis Gave Employees Credit For His Success

Cyrus H. K. Curtis, Philadelphia publisher, who when he died was the publisher of prosperous newspapers and even more prosperous magazines having nation-wide sales running into the millions, ascribed his success to the men who worked for him. He once said:

"The main point with me always has been in getting somebody to do a job better than I could do it myself. I knew what I wanted, but I could not always accomplish it. The success of our organization has been due entirely to the people I have found."

The late Edward K. Bok, editor of the Ladies' Home Journal, was probably as well known, if not more so, than his employer. It was he and not Cyrus H. K. Curtis who made that magazine. The personality of the men at the head of the editorial staffs is imprinted on the pages of the Curtis publications.

Unquestionably Mr. Curtis was a man of wonderful business instincts. He started in the newspaper line with a capital of three cents when he purchased the last three papers from a newsboy and sold them at the full price. With his six or nine cents he bought a few more papers next day an pyramided his earnings day by day until at length he decided he would make newspapers and magazines his life work. Probably he was more a business man than a journalist. If his first business deal had been bananas he might have become a great fruit merchant.

The salient fact in his career, however, as he said himself, is that he picked men who could do certain jobs better than himself.

That is how lots of successful men succeed. Sometimes they recognize that fact in a material way—and sometimes they don't.—St. Thomas Times-Journal.

Left-Handed Children

Should Not Be Forced To Use Right Hand

Kettering education committee has forbidden its teachers to stop left-handed children from using the left hand for writing and other manual work. This has been done in consequence of a report by Dr. C. B. Hogg, the medical officer, whose attention has been directed to certain cases of stammering. The inquiries revealed that a number of these cases were left-handed children who had been converted to writing with their right hands.

Dr. Hogg cited facts showing that of 41 left-handed children who were compelled to use the right hand 24 became stammerers. In a further case 12 right-handed children were trained to use the left hand, and within five months all developed stammer.

Dean Inge To Retire

Gloomy Dean To Resign From St. Paul's On Account Of Advancing Years

Dr. William Inge, the so-called "Gloomy Dean" of St. Paul's since 1911, announced his intention to resign the position next summer on account of advancing years. He is 73 years old.

He intends to spend his retirement in the neighborhood of Oxford, where he is understood to be negotiating for a house.

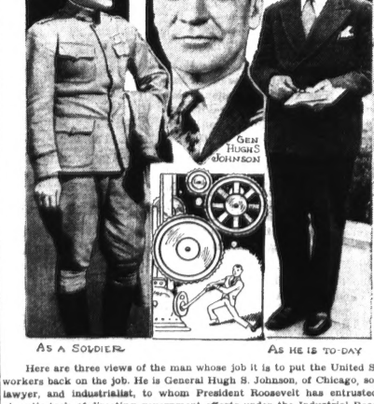

What Puzzled Him

She watched him gazing down at their first-born. Wonder, admiration, rapture, incredulity, chased across his face. She stole up and said, tenderly: "Tell me your thoughts, dearest."

"How can they make that cot for fifteen shillings?"

Business is looking up to those who are looking it up.

CZAR OF RECOVERY PROGRAM WELL EQUIPPED

AS A SOLDIER AS HE IS TO-DAY

Here are three views of the man whose job it is to put the United States workers back on the job. He is General Hugh S. Johnson, of Chicago, soldier, lawyer, and industrialist, to whom President Roosevelt has entrusted the gigantic task of directing government efforts under the Industrial Recovery Bill. This includes supervision over the $3,612,000,000 public works program.

London Conference Delegates Meet On Common Ground At World Garden Party

Dominion Offices For London

Headquarters Are All Together In Heart Of City

The opening of the handsome new offices of the government of South Africa by the King was interesting as another development of the bunching together of the Dominions offices in one particular part of London, England.

The South Africa building occupies one of the most commanding sites in the capital of the Empire at the corner of Trafalgar Square and the Strand, looking down Whitehall and over the street to Charing Cross. Generations of Londoners and overseas visitors knew the building which stood there before—Morley's Hotel. Right across from it on the opposite corner of the Square, is Canada House, the offices of the High Commissioner. Between these two points and on the south side of Trafalgar Square are the offices of the Canadian Pacific and the Canadian National Railways. A few yards further west up another street are the offices of the British Columbia government. There is also a Canadian bank hard by.

Going past along the Strand are the premises of the government of Rhodesia, the offices of the province of Ontario and almost opposite the latter the Australian offices.

So that the overseas visitor seeking his headquarters is right in the heart of London wherever he comes from.—St. Thomas Times-Journal.

Women Stand Adversity Well

In Many Cases Depression Has Been Of Benefit To Them

Although depression has driven a great many men to insanity and nervous disorders, its effect on women has been largely beneficial, according to Dr. Karl M. Bowman, assistant professor of psychiatry at Harvard medical school.

"The effect, as far as nervous disorders are concerned," Dr. Bowman said, "has been much like the effect on many women during the war. They were used to sitting around idle and worrying about themselves, but once the war got under way they occupied themselves with Red Cross work and other activities and forgot their imaginary troubles.

"The depression has given these women something to do, and its effects have been a blessing to the idle rich type, who had too much money for their own good and nothing to occupy themselves.

"Men, on the other hand, have probably increased nervous disorders. Many have broken under the strain, but strange to say, the wives of men hit by adversity are, on the whole, not nearly so badly affected.

"A study of hospitals throughout the state revealed no increase in the number of women phychiatric cases since the depression, the greater number, in almost every hospital, being men."

Theory Often Falls Down

Burglar Given Keys On Leaving Prison Was Soon Back

Modern penological theory believes that criminals in prison should be taught some useful occupation, and on their release be given back any tools they possessed, but here's a case where the theory fell down.

Frank Mazarei was given back a bunch of various-sized keys when released from prison after being convicted of robbing apartment letter boxes. Now he is back for two years on the same charge after using the same keys.

"Where did you get them?" asked the judge.

"When I got out the officers gave them back to me," he replied.

Insurance Period Near Expiry

Ex-Service Men Will Not Be Insured After August 31

The period within which ex-service men may make application for insurance under the provisions of the Returned Soldiers' Insurance Act expires on August 31, 1933, according to a bulletin issued to the Dominion Council of the Canadian Legion by J. R. Bowler, general secretary at Ottawa. Briefly the Act provides for the Government making insurance contracts with any returned soldier domiciled and resident in Canada or with any widow so domiciled and resident, for the payment of $500 or any multiple thefeof, but not exceeding $5,000, in the event of death.

Have Plenty To Boast About

There is a village in Durham where the old folk proudly boast that if their ages were totalled together they would stretch back to the days when Adam was a lad. Shotley Bridge is the place where people live happy and long. It has only a few hundred inhabitants, but they include several nonagenarians and over a score of 80-year-old, while people of 60 and 70 are looked upon as youngsters.

One kind of machine for filling toothpaste tubes can fill at the speed of 140 a minute.

All the world represented at a garden party! Setting: The spacious ground of historic Windsor Castle. Hosts: His Britannic Majesty King George, his gracious Queen and members of the Royal family. "Among those present": Delegates from sixty-six countries, in attendance at the Economic Conference. More than 2,000 guests; many men of many minds, in formal attire; their ladies radiant in the bright raiment of summer. A babel of tongues.

Never before has there been a social function of this unique nature. Never before was it possible. During recent weeks leading statesmen of the civilized world have been converging on old London, "the heart of all creation, where the veins of commerce meet." They gathered on serious business; to seek relief for a sorely afflicted world. They were greeted and welcomed by His Majesty the King; and after finding their bearings and getting down to work, His Majesty the King invited them to a week-end garden party.

That is the way they do things in hospitable England. Business is business; but there must be the week-end relaxation. "All work and no play makes Jack a dull boy." But more things are accomplished during these week-ends, at these gatherings and garden parties, than are dreamed of in the philosophy of people who do not know England and the English. And at this garden party in Windsor Castle grounds leads and contacts may have been established that will mean much later on in the conference deliberations.

Consider the nature of this assemblage of people. Each hemisphere was well represented. There were "men of the Northern zone," and dark-skinned guests from the Orient. East met West. Also men from the Republics of North and South America; from Africa; from the Dominions of the British Empire. Guests from the older lands, and from "regions Caesar never knew." On the grounds were men and women with the easy poise developed through many centuries of Old World civilization, and guests from the newer countries who may have felt ill at ease in the splendid surroundings of an ancient castle at the heart of English culture. But none of them ever before had attended a world garden party. In that they were on equal footing.

His Majesty the King provided for this truly cosmopolitan gathering an opportunity to get acquainted. Of course, there would be no politics at the world garden party but it seems probable that, if, in such delightful environment, delegates from the far places of the earth were brought together in a friendly social way, they would get along better when they returned to work in the great hall of Kensington Museum, where the business of the conference is carried on. The personal touch is mighty in its influence. After all, in the broader sense, human beings throughout the world are much alike; and they all were represented at the King's garden party.

It will be recalled that on the opening day of the conference a threatening pall hung over proceedings, but that this was dispersed by better understanding among the delegates. There were also dark, rain-filled clouds over Windsor Castle grounds as the guests began to assemble; but the kindly sun decided that this party must be a success, and the afternoon was spent under delightful weather conditions. These may be regarded as hopeful auguries. And, taken all together, there is closer association between a World Conference and a world garden party than prosaic observers may imagine.—Toronto Globe.

Autogyro May Replace Observation Balloons

British Air Ministry Has Ordered One For Experiment

Observation balloons, the "Sausages" and other types so familiar to Canadian troops in the war, today are possibly on the way to oblivion. The British Air Ministry has ordered one of the latest type wingless autogyro "windmill" aeroplanes for experimentation as a likely substitute for the balloon, it has been learned. Air ministry experts believe the autogyro will prove superior to the balloon for observation work because of its lesser vulnerability to attack and ability to resist attack or retire quickly in face of a powerful hostile force. The type the air ministry has selected for its experiment will have a crew of five. It will be equipped with wireless and machine guns.

Competing With Apples

Consumption of apples in Canada does not show any great change, though slightly higher in the period 1928 to 1932 than in the preceding five years. There is growing competition from the banana and citrus fruits.

To stimulate interest in the further development and exploitation of oil fields in Germany a central oil association was formed recently in Hamburg.

Rate 31 mills For 1933

By cutting expenses in every possible way, the Council on Tuesday night last saw its way to holding the tax rate for 1933 at 31 mills. This rate will also take care of a 1932 deficit. The council deserves great credit for retrenchments that have made this possible. A full report of the various savings made in conducting the business of the Town will be published next week.

DEATH OF WILLIAM NEWTON

Our citizens received a severe shock on Saturday morning last on hearing that Wm. Newton, an old and highly respected citizen of Lacombe had died suddenly. Sometime Friday night, Mr. Newton was awakened by prowlers in his garden and got out of bed and went out to investigate. He noticed someone in the garden who made off on his approach, and gave chase. Not coming in, Mrs. Newton made a search for him and was assisted by a number of citizens. No trace was found of him for about an hour, when his body was found in the ditch close to J. S. McCormick's residence, only a short distance from his home. Medical aid was at once secured, but it was found that life was extinct.

Deceased had been in his usual health up to Friday night, and it is thought that his death was caused by heart failure, brought on by his exertion in chasing the marauders.

The late Mr. Newton has for several years resided in town, and has had charge of the Curling Rink and Golf course.

Besides his wife, he leaves to mourn, one son and one daughter, both in Lacombe, and one brother at Penbild and 4 brothers and a sister in England.

He was in his 62nd year, and came to Alberta from England.

The funeral was held on Monday afternoon, services being held in St. Andrew's Church, Rev. R. B. Layton officiating. A large number of citizen's were in attendance, and there were many floral tokens of regret.

The bereaved family have the sympathy of the entire community.

TERRIFIC WIND HITS MEDICINE HAT

Medicine Hat, July 19—Sweeping over this city and district from the Northwest with terrific fury at an average of 72 miles an hour for 25 minutes, a high wind caused damage estimated at several thousand dollars.

Telephone and electric light lines were damaged, trees uprooted, gardens ruined, sign boards destroyed, house demolished and box cars blown from their positions in the wake of the storm. Not since 1916 has such a storm visited this district. No casualties were reported to authorities.

We take the following optimistic paragraph from the Royal Bank of Canada monthly review of business: "With a rise in the prices of agricultural and mineral products, increased carloadings, a more than seasonal improvement in employment and an increase in both the volume and unit value of exports, the evidence seems to show that the tide of busines has turned and that its flow will quickly spread to those parched areas which have not yet felt the improvement. The increase in activity of business, together with the influence of the much greater improvement in the United States, has tended to generate an optimism which of itself helps to produce further improvement."

Remember the big dance tonight at Bentley. Bob Paulsen and His Band will supply the music. Come and have a good time.

CHEYNE—MAURER

A very pretty wedding took place at the home of Mr. and Mrs. John Maurer, Clive, Alberta, at noon on Tuesday, July 18th, when Mr. William Craig Cheyne, of Calgary was united in marriage to Hazel Christine, second daughter of Mr. and Mrs. John Maurer. They were supported by Miss Elsa Maurer, and Mr. Alvin Maurer, sister and brother of the bride. The ceremony was performed by the Rev. R. B. Layton, of Lacombe, in the presence of the immediate members of the family. While the register was being signed, a very pleasing solo, entitled "Love's Paradox", was sung by one of the sisters, Miss Esther Maurer, accompanied by Miss Margaret Maurer.

The bride was beautifully gowned in white silk crepe. The bridesmaid wore a mosque blue crepe gown.

After the ceremony, a sumptuous repast was served.

The groom's gift to the bride was camera and case.

The wedding couple left for a trip to Banff, after which they will reside in Calgary.

OBITUARY

Mrs. D. E. Sawyer

Adilda Millicent Peters, was born in North Dakota, U.S.A., on June 22, 1909, departed this life July 10, 1933, age 24 years, 18 days. She married on Dec. 27, 1926 David Edwin Sawyer. To this union was born three sons: Durward Edwin, 5; Millard Laverne, age 3 and Theodore Leslie, age 9 months. Besides her husband and kiddies, she leaves to mourn her loss, her father, two sisters: Mrs. Geo. See, of Rowley, Alta., and Jean, at home; two brothers, Tommy and Durward at home. Always of a cheerful, kindly disposition she will be greatly missed and deeply mourned by all who knew her. The beautiful flowers and large crowd attending the funeral attest to the love and esteem in which she was held by relatives and neighbors.

Dearest Millicent how we miss you;
All your kind and loving care.
But it's God who hath bereft us.
He will all our sorrow share.

The Wrigley Swim and Regatta will be held at Sylvan Lake on Saturday, next, July 22.

Remember the Presbyterial W.M.S. picnic and quarterly meeting to be held at Meridian Beach, Gull Lake, next Wednesday, July 26th.

Miss Jenny Hembury, who is training at the Jubilee Hospital, Victoria is now at home on her vacation.

GULL LAKE NEWS

Large an enthusiastic crowds gathered at the Park on Sunday afternoon and evening to watch the baseball games between Lacombe and Blackfalds. In the afternoon game Lacombe won by quite a large margin. The evening game was called off in the sixth inning on account of rain. At this point it looked like a sure win for Blackfalds as they were leading and were playing first class ball in this game.

Owing to the cold day and threatening rain, only a fair crowd attended the official park opening and sports day yesterday. An interesting program of baseball, races, etc., was arranged by the Gull Lake Sports Club, who are to be congratulated for their endeavors to put Gull Lake on the map. The baseball tournament was won by the team entered by Casey Jones. Teams from the districts adjoining Gull Lake were entered, but Casey's team won by a good margin. It is hoped that another sports day will be arranged soon.

ST. ANDREW'S CHURCH

Pastor: Rev. R. B. Layton
Musical Director:
Mr. L. D. Wright, G.U.E.C.C.
Sunday, July 23

11:00 a.m. Morning service and Sunday School. Rev. D. Ramsey, M.A., B.D., of Fort Saskatchewan, will preach on July 23rd and 30th at the morning service. There will be no evening service.

MAN KILLED AT CROSSING

Edmonton, July 19—Struck by a C.N.R. eastbound passenger train No. 4 from Edmonton, C. Labontie, 55, farmer was fatally injured in a crossing accident at Edgerton, on Tuesday. The car was wrecked.

Railway officials believe that Labontie tried to beat the train to the crossing.

The train was stopped immediately and the injured man placed aboard to be rushed to Unity, where there is a hospital. He died on the train, however, before reaching Unity.

An inquest will be held.

FIGHT PROGRAM AT SYLVAN LAKE

A good fight program has been arranged at Sylvan Lake on Saturday night. The fight, which is being promoted by H. S. Murray is being sponsored by the Sylvan Lake B.P.O.E. Among the well known fighters who will participate in the battles, are: Pete Holm and Gordon McGovern, who are scheduled for a 8-round go. These two fighters have been matched twice this summer and are a well-matched pair. Both men are exceedingly fast. Don Wells will battle with T. Burgess, of Calgary. This 8-round, Lightweight combat should be a real one. Baden Whitesides and D'Arcy Clayton should put up a good exhibition. Both these men are well known and are clever boxers. Kid Watt will meet George Hanson, of Red Deer in a 6-round preliminary, while Young Frizzel will tangle with Ernie Todd. Nominal admission prices will be charged the prices being $1.00, 75c. and 50c.

OLD CHURCH BURNED

For over 40 years an Alberta landmark, gathering place for old-timers and later settlers alike, Pine Creek Presbyterian church, 13 miles south of Calgary on the MacLeod trail, was struck by lightning Wednesday afternoon during the storm, and completely destroyed by fire which followed.

BOY DROWNED AT CALGARY

Clarence Poffenroth, age 6 years, son of Mr. and Mrs. Peter Poffenroth, 26 Riverside apartments, was drowned in the Bow river on Tuesday afternoon. To date his body has not been recovered. The boy fell from the north bank of the river, just east of the Langevin bridge. The river is swift at the point and the body was soon out of sight.

CABARET DANCE

A Cabaret Dance under the auspices of the Gull Lake Aquatic Club will be held in Fernies Hall on Monday evening next, July 24th. A good program is being arranged. Music will be supplied by 'The Troubadors' who are at present playing at Fernies Hall. Book your table now. A good time is promised. Admission 25c.

Remember the dance at Clive tomorrow (Friday) night. Music by Bob Paulsen's 6-piece Band. Come and have a good time.

Rev. J. C. McLennan, B.A., of the United Church, Bentley, will preach at the morning service, Sprucevile, next Sunday, July 23rd.

AT THE AVALON
"Billion Dollar Scandal"

An interesting drama of the inner workings of the oil fields.

Coming: Double Feature, Zane Grey's "Golden West" and "Humanity," July 27, 28 and 29.

Keto Smith in "Hello Everybody," August 3, 4, and 5.

WORLD HAPPENINGS BRIEFLY TOLD

The Hopewell home of Col. and Mrs. Charles A. Lindbergh, from which their first born son was kidnapped in March, 1932, will become a children's welfare centre.

Lest slumbering citizens of Westmount, Quebec, be disturbed some night, the aldermen, meeting in council, decided to spend $70 to provide mufflers for their fire engines.

Recently completed at a cost of more than $1,000,000, arts and science building of University of Manitoba may be abandoned as a temporary economy measure, it is stated.

Foreign missionaries, including a number of Americans, in northeast Szechwa province, western China, have been forced to evacuate their stations as the result of incursions of Chinese Communists and Shenshi.

Miss Jean Barnes, a cowgirl of Butte, Mont., took 68 days to ride a horse 1,700 miles to the world's fair. She has arranged to trade the horse for an aeroplane ride home. It will take about 12½ hours.

In a statement urging recognition of Russia, Senator Norris (R., Neb.) said he was reliably informed the Soviet wanted to buy from America $10,000,000 of meat products, 1,000,000 bales of cotton and $400,000,000 worth of machinery.

Great Britain has agreed to take 50,000 hogs a week from Canada for the next five years providing we can produce the right kind of hogs, Hon. D. G. McKenzie told delegates to the annual convention in Brandon of the Western Manitoba Board of Trade.

Rt. Hon. W. L. Mackenzie King, Leader of the Liberal Party in the House of Commons, will visit Alberta during August, according to announcement at Calgary by N. S. Lambert, Ottawa, secretary of the Liberal National Association.

President Eamon de Valera told thousands of his countrymen the Irish Free State would not wait for agreements from the world economic conference, but would proceed with its own plans for economic improvement.

Making the trip in the shortest time on record, Constable Norris Yates, of the Royal Canadian Mounted Police, "mushed" the 425 miles between Chesterfield Inlet and Churchill in seven days on one of his trips "out" for mail.

New Fire-Fighting Device

Material Used Is Not Injurious To Any Substance

Fire Chiefs from all over the country attended the first demonstration in England of a new fire fighting device that is to revolutionize fire fighting. The material used consists of 90 per cent. air, 8 per cent. water and a few penny-worth of special soap powder, the small tank fitted to the average fire tender, providing an ample supply of water for the most serious fire, thus overcoming the firemen's difficulty in finding water in remote districts. The resultant mixture creates a foam which is absolutely uninjurious to any material, and will disappear in a few hours after the fire is extinguished, thus dispensing with salvage operations.

Incurable Patients

Old Question Of Euthanasia Discussed By American Physicians

Delegates attending the American Institute of Homeopaths heard two doctors debate the question:

"Should physicians be given the legal right to dispose of incurable patients?"

Speaking in favor of euthanasia or medico-legal death, Dr. W. A. Guild of Chicago cited the case of a child monstrosity saved from death at birth after six weeks of care.

He suggested a special court of humanitarians to hear and grant pleas of persons who wish to die. This idea was opposed by Dr. Alonzo C. Tenney, also of Chicago, who said legalized euthanasia would be abused.

Many Musicians Took Part

Largest Military Band Played At Aldershot Tattoo

The largest military band in the world took part in the tattoo held recently at Aldershot. It was part of the great army pageant played by 5,000 soldier actors in the Rushmoor Valley before an audience of 56,000 children who came to Aldershot from London and all parts of the home counties. An army officer who knew all the behind-the-scenes secrets of the tattoo remarked: "There is nothing to touch that living carpet of massed bands. There are 41 bands, 17 bandmasters, 14 drum-majors, including the tallest in the British army, who stands six feet two inches in his bonnet altogether 849 musicians."

When fire broke out in the garden of the Neapul Hotel, Torquay, England, timber from the roof fell on the button of an automobile horn and woke the guests.

During the recent strike of seamen in New Zealand inter-island mail was delivered by aeroplane.

Gain In Employment

Most Encouraging Report Issued By Minister Of Trade and Commerce

"There was an important expansion in industrial activity at the beginning of June, resulting in the greatest increase in employment that has been reported in any month since June, 1930," according to a statement issued by Hon. H. H. Stevens, Minister of Trade and Commerce.

"The Dominion Bureau of Statistics reports," said Mr. Stevens, "that the payrolls of 8,105 firms throughout Canada increased from 715,068 on May 1, to 743,572 at the beginning of this month, or by 28,504 persons. This gain of four per cent. was approximately twice as large as that reported on the same date in either 1932 or 1931 and, unlike the increase last year, has the added significance of including much smaller increases due to employment relief undertakings. The increase was greater than the usual seasonal gain recorded in the last twelve years.

"Pronounced advances were reported in manufacturing, the additions to staffs exceeding those noted on the same date in other years of the record except 1922 and 1928. The favorable movement extended to nearly all classes of factory employment. In the non-manufacturing division all the major industrial groups except communications also showed improvement. Stream-driving operations resulted in heightened employment in logging. This group and trade, as well as mining and services, showed improvements which compared favorably with the movements on the corresponding date of 1932."

Selling More Art Treasures

Earl Of Egmont's Priceless Silver Plate Going Into Auction Room

More treasures of the rancher Earl of Egmont are to be sold at Christie's in London. The old masters and other pictures inherited by the late Earl have already been dispersed, and now the massive silver plate is coming into the auction room.

It is only four years since Frederick Joseph Trevelyan Perceval left his ranch in Alberta and went to England to settle at Avon Castle, Ringwood, Hants, as the tenth Earl of Egmont.

The silver plate now to be sold contains a good deal of 18th century silver salvers, meat dishes, and the like, several of which were especially made for the second earl.

The most important item is a rare James I. silver-gilt wine-cup, an heirloom which had been presented to Lord Arden, another branch of the family, by Princess Elizabeth, afterwards Landgravine of Heese Homberg, for use in his chapel at Nork. The Baron Arden was a Lord of the Admiralty about the end of the eighteenth century, and was M.P. successively for Launceston, Warwick, and Totnes.

A set of three George I. casters is another rare item bearing the name of the celebrated London silversmith, Paul Lamerie, 1725.

A German silver-gilt tankard has an inscription showing that it was presented to Lord Arden by Queen Charlotte, the consort of George III.

Work Still Uncompleted

Much Yet To Be Done On Parliament Building At Ottawa

Canadians have every right to be proud of their Parliament Building. It is the finest example of pure Gothic architecture on the continent, and it will be even more beautiful when it is finished.

In view of the fact that it has been building since 1916, it may come as a surprise to many that it is still in an uncompleted state, yet that is the case. The work that has been in progress recently on the exterior of the Windsor Federal Building calls attention to the jobs still to be done at Ottawa.

Throughout the interior, set into the stone walls, there are many large square blocks of granite. Designs exist for the elaborate carving of all these, but the carving has been postponed, mainly on account of economic stringency. These crude blocks of stone are found even in the Commons and Senate Chambers. In fact, the only part of the big building in which the carving is completed is the Memorial Chamber in the Tower of Peace and Victory.—Border Cities Star.

The wings, rudder and elevators of a new British aeroplane are made of virtually transparent material covered with wire mesh, making the plane almost invisible at high altitude.

Slow motion pictures reveal that when a bullet is shot at a pane of glass, the compressed air travelling in front of the projectile pierces a hole in the glass before the speeding bullet strikes it.

Soap is not needed on washing day on Cape Clear Island, County Cork, Ireland. The laundry is done in the water of an alkaline lake on the island.

Methods of protection against air attacks are to be taught to children in German schools as a compulsory subject.

Britain's shoe trade is booming.

Winnipeg Newspaper Union Fashions

By Ruth Rogers

DAME FASHION HAS TAKEN A LOOK AT SHOULDERS AND MADE THEM QUITE RUFFLED ABOUT THEMSELVES

The bodice has a becoming surplice collar that winds about the waist and ties in a pretty girlish bow at the back. The short sleeves have just the right puff. The pattern also provides for long sleeves.

The skirt is straight and slender; slightly flared toward the hem.

This darling affair is so easy to make, the skirt being in two sections. And will you be surprised at its small cost!

Gray crepe print made the original. The cunning collar is white crepe. Another idea for the collar is white organdie.

Plain crepe silks, batiste prints (particularly in polka-dots), linen in plain or gay stripes, chiffon cotton voile prints, etc., are seasonable and delightful.

Style No. 722 is designed for sizes 14, 16, 18, 20 years, 36, 38 and 40 inches bust. Size 16 requires 3½ yards of 39-inch material with 1⅞ yards of 35-inch contrasting.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Oil From Waste Gas

Conservation Measure Adopted By Alberta Government

Experiments which have been made for some time designed to recover additional naphtha from the millions of feet of natural gas going to waste in the Turner Valley oil field, about 40 miles southwest of Calgary, and the most productive oil field in Canada, have proven successful. One of the largest operators in the field has recently installed an absorption plant and is now recovering naphtha from the waste gas at a rate which will mean more than 124,000 barrels annually added to the regular naphtha production of the field. The daily additional recovery made possible by this plant is expected to average 342 barrels. The total annual value of the additional naphth thus recovered in gross revenue is estimated at over $374,000.

The conservation measures adopted by the provincial government of Alberta to control wastage of gas as far as possible, are now in effect, limiting the daily production of gas of each well to 40 per cent of the assumed open-flow volume of the well.

Curious: "I wish I could find out how many relatives I have."

Cynic: "Why that's the easiest thing in the world—just buy a summer cottage."

The ages of five sisters and their brother in Edmonton, England, total 471 years, the oldest sister being 86, and the brother, who is the youngest of the family, is 69.

A statue to Marshal Foch will be erected in the Forest of Compiege, France, where the Armistice was signed.

A new process of extracting copper from its ores by means of iodine has been developed by chemists in Chile.

Life Really Begins At Forty

Los Angeles Professor Thinks Fear Of Dying Kills Many People

Men and women of middle age should not think they are treading a downward path. Life really begins at 40. Men should live to be 100, constantly growing in grace and mental power. Women grow ugly from vanity and fear of dying kills rather than actual old age.

These were observations of Frederick P. Woellner, professor of education at the University of California at Los Angeles. He related specific tests and studies of noted teachers to substantiate his beliefs.

"If a man dies before 60, something kills him, an it isn't old age. Fear of death kills some people. If they didn't think of dying they would live twice as long," commented Prof. Woellner.

"As long as a woman thinks she is young she retains her beauty. The idea of youth rather than rouge keeps her beautiful. Vanity is beauty's worst enemy. The woman with a lifted face wears a haunted expression more disfiguring than a double chin."

Prof. Woellner pointed out the laboratory findings of Prof. Thorndike of Columbus University, and the studies of Prof. Raymond Pearl, bearing out Woellner's belief that the human mind is strengthened with old age by proper education. He suggested that adults follow a course of intellectual study in summer schools and university courses.

Prodigies, it was explained, rarely retain their genius late in life. Many of the world's greatest achievements were attained by men and women late in life. The machine age and comparative ease of man's labors are responsible for increased mental faculties.

Thief Had Expensive Tastes

Took Only Valuable Articles From New York Tobacco Shop

A slender thief with an expensive taste in smokers' equipment made his way through two transoms and into the retail tobacco shop of Alfred Dunhill, of London, Inc., 514 Fifth Avenue, New York, where he looted thirty show-cases and carried off jewelry, cigar lighters, clocks and pipes valued at nearly $25,000. There were two noteworthy things about the intruder, he was small and agile enough to pass through a pair of apertures no more than twelve inches high. He was discerning enough to ignore articles of silver. Nearly all the cigarette and vanity cases he selected were gold, and he took pipes only from the Grade A rack, where prices range from $50 to $65.

Not Looking For Charity

Man Appeared Poor But Had Fortune In Bills

An old man munching half a loaf, his clothes in tatters, excited kindly interest of civil guards at Dundalk, Ireland, and they took him to their barracks to treat him to a square meal.

To the astonishment of all he extracted from his pocket $50,000 in bills.

The old man, who refused to give his name, explained he had been his own banker throughout the bank troubles in the United States and had returned to Ireland, with his hoard after 46 years in the United States.

Conference Helped Trade

Ottawa Imperial Conference trade agreements have resulted in an increase of more than $10,000,000 in Canada's exports to the United Kingdom during 1932, according to Hon. H. H. Stevens, Dominion Minister of Trade and Commerce. This had occurred, he added, while trade all over the world showed very marked declines.

Happened In Budapest

A farmer's family of eighteen came to town to see a show, but foun that not one of the theatre's boxes could hold them even at the tightest squeeze. So nine of them saw the first part and nine of them the second. No. This is not a story from the land of Burns. It happened in Budapest.

Consumption of eletctric power in Italy continues to increase.

ASSASSIN'S TARGET

Mme. Venizelos, wife of the ex-Premier of Greece, smiles bravely for th camera from the hospital bed in Athens, where she is recovering from four bullet wounds received when an assassin attempted the life of her husband. The ex-Premier escaped unhurt.

Recipes For This Week

(By Betty Barclay)

GRAPE-NUTS RAISIN PIE

¾ cup grape-nuts.
¾ cup raisins, chopped.
1½ cups brown sugar.
2¼ cups hot water.
¼ cup cider vinegar.
3 tablespoons butter.

Line a 9-inch pie tin with paste rolled to ⅛-inch thickness. Combine ingredients in order named and cook 10 minutes. Cool and pour into pie tin. Roll remaining paste to ⅛-inch thickness, cut into ½-inch strips, and place ½ inch apart over top of pie to form lattice top. With sharp knife, trim off surplus paste, moisten rim with cold water, place ½-inch strip paste around it, and press edges together with fork dipped in flour. Bake in hot oven (425 degrees Fahrenheit) 15 minutes, then reduce temperature to moderate oven (375 degrees Fahrenheit). Continue baking 25 minutes, or until pie is delicate brown.

ORANGE MALTED MILK
(Serves 1)

1 tablespoon malted milk powder.
½ cup boiling water.
¾ cup cold water.
2 tablespoons orange juice.
Cracked ice.

Mix malted milk powder with boiling water to make a smooth paste. Add cold water and orange juice, strain over cracked ice into glass.

Would Not Know Himself

New Concrete Image Of Buddha Is Lighted By Electricity

Buddha the unchangeable changes as far as his statues are concerned with the times. A new image of him is being built in Japan of reinforced concrete with interior lighting by electricity. The seated figure is 150 feet high. The head is 63 feet in circumference and the dimensions of chubby Buddha face are 24 feet by 19. The interior is arranged in three storeys and inside the big Buddha in niches against the wall will be thousands of little Buddhas. After this new-fashioned concrete Buddha one would not be surprised to see the old-fashioned, hand-powered prayer wheels replaced by wheels turned by steam or electric power.

Smartie: "Do you keep joints to suit all purses?"

Butcher: "Yes."

Smartie: "Then, what have you for an empty one?"

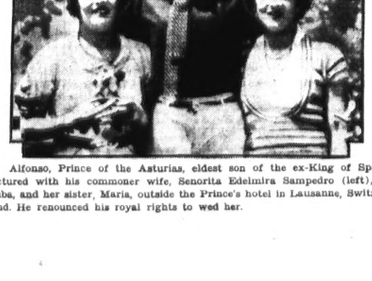

Butcher: "A cold shoulder."

There are t o be 60,000 hot-dog stands at the Chicago Exposition this summer. A century of progress!

Thirty miners are prospecting for coal uner the Firth of Forth, Scotland.

SPANISH PRINCE AND CUBAN WIFE

Alfonso, Prince of the Asturias, eldest son of the ex-King of Spain, pictured with his commoner wife, Senorita Edelmira Sampedro (left), of Cuba, and her sister, Maria, outside the Prince's hotel in Lausanne, Switzerland. He renounced his royal rights to wed her.

Pioneer Steamship Company

Cunard Line Celebrates 93rd Anniversary Of Its Inception

This year the Cunard Line will celebrate its 93rd anniversary by sending the "Aquitania" to Halifax, Nova Scotia, the first port touched by a Cunard ship in America in the first year of its trans-Atlantic life, in 1840. The occasion will feature a week-end cruise to the Nova Scotian port.

The Cunard Line's birthday, like that of the United States, falls on the Fourth of July, the first ship of the Line, the "Britannia," leaving Liverpool, England, on that date in 1840, and sailing at Halifax and Boston 93 years ago.

The Cunard Line is the oldest trans-Atlantic steamship company—in fact, the first to operate across the Atlantic on a regular schedule. Previous to the regular sailings of the "Britannia," other steamships had crossed the ocean, but their voyages were entirely in the line of experiments. The Cunard Line started to run on a weekly schedule in 1840.

The first ship to cross the ocean was the "Savannah," built in New York City. She sailed from the Georgia city for which she was named, on May 25th, 1819, arriving in Livrpool on June 29th, 35 days later. She did not rely solely upon her paddle-wheels; in fact, she trusted more to her sails, being under steam for less than 100 hours.

Twelve years later, the first "Royal William" made the entire trans-Atlantic voyage under steam.

No further steam venture was made until April 4th, 1838, when the "Sirius" left London, England, for New York with 94 passengers aboard. She was followed from Bristol four days later by the "Great Western," the first steam vessel specially built for the Atlantic passage. The "Great Western" made the trip in 15 days, two days less than the "Sirius," and arrived with 200 tons of coal left in her bunkers. The result was regarded as wonderful.

Samuel Cunard was a close observer of all these happenings. Living at the time in Halifax, he had acquired several sailing vessels, in which he carried mail between Newfoundland, Boston and Bermuda.

During the year 1838 the British Government had sent out circulars inviting bids for a faster and more reliable means of transit for postal matter by steam vessels. One of these circulars found its way into the hands of Mr. Cunard (later Sir Samuel) and he concluded that here was his golden opportunity.

Unable to raise necessary capital in Halifax, Mr. Cunard sailed for England. He was now 50 years old. He received but little sympathy in London, but as he had a letter of introduction to Robert Napier, a shipbuilder on the Clyde, he went on to Glasgow. Mr. Napier welcomed Mr. Cunard and introduced him to the two ablest shipping men in Great Britain—George Burns of Glasgow, Scotland, and David MacIver, of Liverpool, England. Between these three men $270,000 capital was subscribed and Mr. Cunard was in a position to submit a tender for the conveyance of mails once every two weeks between Liverpool, Halifax, and Boston.

This tender was lower than that made by the owners of the "Great Western," Mr. Cunard's principal rivals, was accepted and a contract for seven years was let to the North American Steam Packet Company, the original name of the Cunard Line.

To carry on this trade, plans for four steamers, the "Britannia," "Columbia," and "Caledonia," were drawn up and accepted during 1839, and the ships were launched early the next year, 1840.

The "Britannia," with 64 passengers, started on her maiden voyage from Liverpool to Boston on July 4th, 1840, and arrived in Boston 14 days and 8 hours later, including a stop at Halifax, considered at the time a rapid passage.

The mail service grew to such an extent that the "Hibernia" was added in 1843, and the "Cambria" in 1845.

In 1847, when the company's first mail contract had expired a new contract was entered into with the Cunard Line and provided for weekly sailings from Liverpool to New York and Boston.

More ships followed, all being built of wood, but with no radical departure from the "Britannia" until the year 1852, when the iron screw steamer "Australia" and three sister ships were built.

The company's first steel liner was the "Servia," built in 1881. She was the first Cunarder to be fitted with electricity. She was superbly fitted for those days and provided accommodation for 480 cabin and 750 third class passengers.

The "Campania" and "Lucania," built in 1892, were among the first big ships, registering 13,000 tons. Both were fast, the "Lucania" making the westward crossing from Queenstown in five days, seven hours, and twenty-three minutes. It was on this ship that Marconi experimented with and first introduced wireless telegraphy.

New quadruple propellers speed the Cunard Line's big three—the "Berengaria," "Aquitania," and "Mauretania,"—through the seas.

Thus the history of the Cunard Line has to a great extent been the history of shipping, beginning with wooden side-wheelers, followed by the iron ship, the single screw, the steel ship, then twin, triple and quadruple screws, and all built and propelled in the interest of the speedy transportation of mails between Great Britain and America.

Samuel Cunard was knighted in 1859 because of his outstanding services in the Crimean War. He died in London, England, in 1864, in his 78th year.

Ontario Poultry

That Ontario farmers are confident poultry is again to be one of their best cash crops is shown by the fact that more chicks have been hatched and sold this year than in any year to date. From present indication, according to Mr. T. A. Benson, Dominion Poultry Branch, the present year should be better than 1932 for those in the poultry business.

One-fourth the divorced persons in England and Wales live in London.

Coal Subsidy

One-Seventh Of a Cent a Mile On Coal Shipped From Saskatchewan Lignite Fields

Subsidy of one-seventh of a cent a mile on coal shipped from Saskatchewan lignite fields to points in Manitoba and as far east as Sioux Lookout, has been made effective by federal order-in-council.

Word of the passage of the order-in-council providing for a subsidy of one-seventh of a cent a mile, but not to exceed in any case a total of 40 cents a ton was received recently by officials of the Saskatchewan department of railways, labor and industries.

The freight concession will apply only on lignite coal shipped out of Saskatchewan to Manitoba and western Ontario points for industrial purposes only, and will not apply to anything under carload lots.

The concession will be accorded only to mines established before December, 1931.

The rate concession will place Saskatchewan mines in a favored position in competition with coal from American mining fields for distribution in Manitoba.

The order-in-council provides for the freight concession being actually paid to the railways by the government, the adjustment to be made direct to the mine operators.

Ban On Socialists

Germany's Social Democratic Party Has Ceased to Exist

Germany's Social Democratic party, once the leader of Socialists the world over and the winner of the 1918 revolution, has ceased to exist as a legal political organization.

Chancellor Hitler's heavy hand, which first fell upon the Communists, has now descended upon the party which long was the leading one and was regarded as an impregnable bulwark of the post-war republic.

All speeches in recent days by Nazi leaders indicate the Hitler movement intends to claim 100 per cent. power in Germany.

A serious blow was dealt to department and chain stores in an order issued by Chancellor Hitler's commissar for business, Otta Wagener.

Department and chain stores were forbidden to maintain barber and beauty shops, photographic studios, bakeries, sausage factories, customs tailoring deartments, watch repair and optical shops, automobile and bicycle repair shops, circulating libraries, banking and money exchange offices and furniture factories.

Secret police suspended for one week the National Deustache Zeitung, one of whose editors is a nephew of Dr. Hugenberg.

Mechanism Of the Ear

Little Is Known As To How Ear Sound Is Conveyed To the Brain

The mechanism of the human ear has been known during long ages, but the manner in which it conveys definite information to the brain is another matter. The world is still far from a final pronouncement, however learnedly one may speak of sound-waves striking upon the drum of the ear and establishing a vibration which is communicated to the brain by a row of white threads attached to a series of wonderfully-articulated bones. That the threads, like the aerials which catch the flutterings of the ether bearing sounds across the oceans, and give them rebirth exactly as they were born thousands of miles away, to the last squeak of the clarionet or chirp of the piccolo; translate to human brains the meaning conveyed by the air vibrations which lap against the ear-drum or tympanum does not greatly help. A writer says: "We call the threads nerves, but how the tympanum adapts itself by contraction and relaxation to the different pitch of sound without our will intervening we have no idea. We know only that it does."

Distributing Radium

Product From Extract Plant At Port Hope Is Now Available

Chemists at the national research laboratories at Ottawa, bent over minute measuring apparatus recently, standardizing Canadian-produced radium. In a few days it wil lbe sold to doctors, clinics and hospitals throughout the country. The radium extracted from Great Bear Lake deposits, came from the extraction plant at Port Hope, Ontario.

Looks Like Prosperity

What is this? Prosperity turning the corner? A new Broadway cafeteria in New York announces that the floors in its windows will be paved with silver dollars. Light-fingered gentry need not come around. The coins will be cemented hard and fast.

In the first 18 months of operations of the only air service in Greece it carried 10,950 passengers, 257,700 pounds of merchandise and 17,500 pounds of mail.

Spain's longest commercial air route is between Barcelona and Seville, a distance of 570 miles.

Air travel in Europe is more popular this season than ever before.

CHAPTER XII.—Continued

"But sir," he led on, "when I came back from the Alooska patrol, he wouldn't co-operate with me then. He didn't seem much interested, I don't think, in getting those bandits."

"Not much interested?" Haskell echoed, with a great show of astonishment. "Sir, I wanted him to make a patrol to the Inconnu River. But he was in a temper. He wouldn't even listen to my suggestion."

A wild elation surged through Alan. One more step and Haskell was doomed! He fought down his elation and fidgeted uneasily in his chair.

Williamson bore down on him hard. "Baker, answer that charge! Haskell suggested a patrol to the Inconnu. In my opinion that was a splendid suggestion. It was almost the only hope of capturing those criminals. You wouldn't listen to him. How, then, can you assert you were forced to buy out?"

"He didn't . . . It wasn't him that made that suggestion," Alan stammered weakly. "I think—I believe I made that suggestion myself. But he wouldn't let me go."

"That's a lie!" Haskell pounced upon him. "I suggested it. I begged him to make that patrol."

Alan looked at Haskell. "You suggested that Inconnu patrol? It was your idea?"

Haskell nodded. "I did. Whipple can witness it." He was smiling openly in triumph.

All Alan's hesitation dropped away from him. There was no longer need to dissimulate. He turned to Williamson. "You heard him. You heard what he said. He told you he suggested that Inconnu trip. He just repeated it and he said Whipple was witness. Don't let him back out of it now."

"I don't have to back out of anything," Haskell snapped. He was staring in sudden uneasiness at Baker.

"Yes, I heard him," Williamson answered. "What about it?"

Alan rose slowly to his feet, pulling himself up to his full lanky and powerful height. In that moment when he realized Haskell was caught in the deadly trap, his mind whipped back to Joyce's home on the Alooska, to Joyce's room where he had lain through weary hours of doubt and pain, and where he and she had carefully plotted this trap. He felt a wordless tender gratitude to Joyce; this stratagem was hers more than his; her quick brain had been the first to see its crushing possibilities.

"Inspector, you say you asked me to lead that Inconnu detail. You say you suggested it. You say it occurred to you that the bandits would escape by that river. I say you are a liar! I propose to prove you're a liar."

He paused a moment, then raised his right hand and pointed at the wall chart behind Haskell's desk.

"The Inconnu River is not shown on that map of yours, inspector. You tried to find out from that Indian, Little Otter, where the river is. You didn't know. You don't know now. How could you suggest sending a patrol to a river when you haven't the slightest knowledge of its location? Step up there to that chart, you, and show us the Inconnu!"

Haskell sprang to his feet, snarling at Alan. "I don't take orders from you!" He was fighting like a trapped wolf. His panic, his livid face, betrayed him.

"Then consider it an order from me!" Williamson commanded. "Show me where the Inconnu is!"

Haskell did not stir. His impregnable defense had crumbled in one spot; the sea was rushing in upon him. . . .

He heard Williamson thundering: "I say, answer Baker's question! How could you suggest a patrol to a river that you know nothing about?"

Haskell did not answer. Caught, trapped. . . . He had gone too far, he had overplayed. . . . He heard Larry Younge's savage mocking laugh; heard Bill Hardsock chuckling. "Tried to steal Alan's thunder, and got struck by 't!" . . . Williamson's angry erect figure became a blur. . . . Across the desk he saw Alan Baker's face in a sort of haze, not smiling at him, not mocking, but hard, pitiless. . . . The man had beaten him, had taken away the girl he loved—this man whom he hated so fiercely that once he had tried to kill him.

Out of the haze he heard Baker's voice, "Liar! Smoother!" . . . Something snapped within, and his last vestige of self-control was swept away. A maddened anger shook him, blinded him. In a fury he suddenly drew back and swung and smashed a fist against that hated face, as though trying to blot it out.

The blow unsteaded Baker for a moment. He stepped back. Williamson tried to interpose. Bill sprang up and leaped across the room to jump between them. But Haskell had swung again. Alan flung up his left arm to protect himself. A grimace of pain jigged across his face as the blow fell upon his wound. He did not step away that time. . . . For an instant his eyes measured distance. . . . His right arm went back, swung, and his hard fist caught Haskell under the jaw, a single smashing blow that dazed him and sent him reeling against the wall.

When Bill and Pedneault helped Haskell to his chair and he sat down, groggy and white of face, Williamson bade the two:

"Take Constable Younge and get out. Baker, stay here; I want you here."

Vaguely Haskell realized that the superintendent was ordering the men away so that they might not witness the humiliation of an officer. He had lost. The avalanche had crashed down upon him. Baker had come triumphant through this hour.

But in those moments of his crushing defeat, while Williamson was trying to get the men out of the cabin, Haskell felt the first small breath of a strange relief, like a cool wind across his face. He had become inured to lies; had been sucked deeper and deeper into a morass of falsehoods and perfidy. He was free of all that now. In these last weeks there had been times—when he looked upon Larry Younge, when he thought of Baker's great-hearted adventure, when the news came of Dave MacMillan's suicide—that his conscience had revolted and he had loathe himself. He felt as though by making a clean breast of everything to Williamson, he would be coming out of a dark and noisome place into the sunshine again.

Only the old aching madness toward Elizabeth Spaulding would not down, but rose to torture him.

CHAPTER XIII.

By the Lightning Flash

At Alan's cabin late that evening, Bill was sitting on the edge of the cot, head in hands, plunged into dejected thoughts. He was in such a blue funk that he neither heard nor cared what Alan and Buzzard were talking about.

An hour ago, by sheer accident, he had discovered that he himself was now officially in charge here at Endurance. Walking past Haskell's cabin in the twilight, he had caught a few angry sentences from Williamson:

"If I had the entire say-so, Haskell, you'd go out of the Mounted faster than you came in. You're suspended; Hardsock will be given command here till I see what Baker is going to do. You don't deserve a chance to walk straight, but I'll give you one rather than kick up a row over you. There's a rook detachment down on the Border that's about your fit. I'm going to transfer you there, and I'll try not to laugh when I see men saluting you."

To be in command of the detachment was small solace to Bill. It simply meant more work, more responsibility, without Alan's judgment and leadership to lean on.

In the shaft of light streaming from the cabin door a girl's figure appeared. Bill straightened up suddenly, recognizing Elizabeth. Always a bit afraid of the supercilious girl, Bill had no desire to linger and find out her trouble. Nudging Buzzard, he whispered:

"She wants to talk with Alan. We'd better get out."

As Elizabeth came across to the library nook in the full candle glow, Alan saw she was angry, and instantly guessed the cause of it. She had heard . . . She was going to fling reproaches at him, perhaps throw an ultimatum into his face.

With no word about his long patrol or the wounds he had brought away from it, Elizabeth demanded:

"Is it true—what I've heard—about that reward money? You're not going to accept any of it?"

Alan was shocked that in her first breath she should speak of money. He said rather tersely:

"That's not altogether true. I'm taking enough to buy the MacMillan trading post for Larry; and I have to pay for those things Buzzard and I stole in Edmonton. But I'm not keeping any of it otherwise."

"Are you crazy—to throw away more than you've made in all the years you've been stationed here in this backwoods? Why did you go on that patrol and waste all these weeks?"

"Good Lord, have you been thinking I did it for the money? Is money the only thing in the world you ever think about." He tried to curb his anger and speak quietly. "Elizabeth, your brother Curt went on a patrol, he gave his very life, because—because You may not understand why, but God knows it wasn't for money."

"Then you intend to throw away ten thousand dollars?"

"If you want to put it like that, yes. I couldn't associate with myself if I'd accept one red cent of it."

In silence they looked at one another, Elizabeth angry and accusing, Alan firm, unyielding. After a moment, realizing she had run up against granite in Alan Baker on this question, she turned to another.

"There's something else I want an understanding about. Mrs. Drummond told me you intend to take care of Jim Montgomery's girl. What makes you feel you're responsible? Why on earth . . . Just because you were acquainted with that child's father—"

Alan sharply interrupted her. "Elizabeth, let me point out something to you. It may be cruel and ungenerous of me, but it's got to be said. When Curt was taken, it fell to me to look out for you. You were a grown woman; you had chances of employment; you had other advantages. But I assumed responsibility. Please, now, I'm not throwing it up to you; I did it freely and would've done more if I'd been able.

(To Be Continued).

Plan Big Monument

Statue Of Christ To Be Erected In France

France is soon to have one of the largest statues of Christ in the world.

This colossal monument which will be erected during the 19th centenary of the Saviour's death on the cross, will rival in superb situation and grandeur that of the great cross of Mount-Royal, in Canada, the monument of la Cordilliere of the Andes and the great monument dominating the bay of Rio de Janeiro.

Sculptor M. G. Serraz, author of the Christ-Redemptor of the Island of Madeira, is executing the statue in hard granite which will withstand all temperatures.

From the hem of the mantle which will be 25 feet in width, to the top of the head, it will measure 60 feet and will repose upon a base 30 feet high. Then the whole monument will be placed upon a rock 90 feet in height overooking a magnificent part of the French Alps.

Behind it will be a great pine-forest and in front, the peaks of Orus, the Dome and Gouter, all of them of more than 12,000 feet.

On the base will be placed a marble plaque recalling the remarkable feats of ascension of these mountaintops made by Monseigneur Achille Ratti, who later became Pope Pius XI.

Good roads will lead to this great monument which is expected to attract tourists from all parts of the world.

Short and Long Lives

Great Age Attained By Animals Which Have No Enemies

We usually find that animals with practically no enemies live to a great age. There are whales living that were youngsters when James 1. was king; some turtles in our zoos have lived through many reigns, yet they seem fit to go on for another hundred years.

If we pass to the other extreme and look into the span of life of some of the small insects, we see that their lives consist of a few hours only. The mayfly comes out of its chrysalis at noon on a bright summer day; two hours later it has reached middle-age, and by four o'clock it is dead. Those tiny midges we see on warm summer evenings have even a shorter life. —Oliver G. Pike in London Tit-Bits.

More Work In U.S.

William Green, president of the American Federation of Labor, said recently more than 1,200,000 men had gone back to work in the United States since March. The federation president estimated the return to work during April at 735,000 and added 495,000 had been re-employed during May.

Temperature Of the Stars

New measurements of the temperatures of stars that apparently are the hottest of any in the heavens were reported at the American Association for the advancement of science by Dr. C. S. Beals of the Dominion astro-physical observatory, Victoria, B.C.

Cheam, England, recently held its 800th annual fair.

The Handiest thing in the KITCHEN HANDI-ROLL

For covering shelves. Lining drawers, etc. 25 foot white or coloured rolls. All dealers, or write—

Coppleford PAPER PRODUCTS HAMILTON, ONTARIO

New Workable Toys

Wonderful Exhibit At American Toy Fair In Chicago

Samples of what Santa Claus will leave in young America's stockings next December were on display at Chicago at the American Toy Fair, world's largest annual exhibit of toy manufacturers. And these samples, of which there were nearly 50,000 included:

A sled on wheels. A flesh-like rubber doll with a hard rubber composition head. It can be rubbed and scrubbed and come out the better for it. An outdoor motor boat that races 100 feet a minute, reverses itself and comes back.

And has the little red wagon gone modern! It struts stream lines, an electric headlight and "skirts" on its wheels.

The toys have gone workable. There's a little washing machine that can get results on dolly's soiled socks and a fire-engine that pumps water. There's a new outfit whereby a mechanical-minded youngster can make his own army of metal soldiers.

In general, one might characterize the toys as largely educational—and to this, Wm. C. Lehman, president of the Toy Manufacturers' Association, credits the steady increase in sales even in recent not so prosperous years.

Oxford Group Platform

Independent Candidate Announces Policy Of Absolute Honesty

Hugh Savage, independent candidate for the legislature in Cowichan-Newcastle, B.C., announced at the nomination convention at Duncan his Oxford group platform of "absolute honesty, absolute purity, absolute unselfishness, absolute love."

Mr. Savage is publisher of the Cowichan leader and a widely known newspaperman, and a supporter of the Oxford group movement. In his speech he told the convention:

"If you want to put me in you have got to know what sort of man I am, and I have changed. I have discovered —I know—that the only remedy for this depression will come by the individual altering his views. It is no use changing the government unless we change ourselves.

"My paper, by its motto, is pledged to religion, liberty and law. If you want to vote for me, think of that."

Mr. Savage pledged himself to fight "this accursed patronage that makes even the poor devils on the roads today bow to the foreman for fear of their jobs."

Menace To Happiness

Claim Course Of True Love Runs More Smoothly Without Mother-In-Law

Mothers-in-law were indicted as frequent menaces to matrimonial happiness before the American Association for the Advancement of Science.

The course of true love apparently runs more smoothly without them, Dr. Leonard S. Cottrell, Jr., of University of Chicago, told a group of sociologists.

He presented a mass of statistics elevating to the status of scientific theory ancient quips concerning the home-wrecking propensities of doting mothers.

"Marry in haste—repent with alimony," Dr. Cottrell said. His findings supported the theory that long acquaintances, long courtship and long engagements were conducive to happy marriages.

Disease Immunity

The American Institute of Homeopathy was told by Dr. G. W. Boericke, of Philadelphia, that immunity to disease depends upon fat particles in the blood. And lean persons, he said, are quite as apt to have these particles as are fat individuals. Dr. Boericke is a professor of therapeutics.

Pretty Teacher (having written sentence on the blackboard: "It's a month since I been to the cinema"): "Willie, what must I do to correct that?"

Willie: "Tell your young man, miss."

The government of Siam is boosting railway construction.

"NOW I FEEL FULL OF PEP"

After taking Lydia E. Pinkham's Vegetable Compound

That's what hundreds of women say. It steadies the nerves . . . makes you eat better . . . sleep better . . . relieves periodic headache and backache . . . makes trying days endurable.

If you are not as well as you want to be, give this medicine a chance to help you. Get a bottle from your druggist today.

Doctor Worshipped By South American Natives

Image Carved On Staffs Of Medicine Men In Jungle

Almost "stranger than fiction" is a tale from South American jungles of a Scotch doctor worshipped today as a god for cures he worked more than 200 years ago.

The doctor, William Patterson, enjoys a strange sort of immortality today—his image, complete with old-style hat, buttons, collar and tie, is carved on the staffs of medicine men who believe it will work cures as the doctor himself once did in life.

Worship of his images has spread far into the interior to tribes never in contact with the Scotch colony that Dr. Patterson led in 1698 to settle on the coast of the Gulf of San Blas.

The staffs on which Dr. Patterson's image was carved have been coming into the Smithsonian Institution for many years, collected among tribes in Panama and northern South America.

Treatment For Influenza

Claim Anima's Are Cured After Inoculation With Virus

Effective treatment for influenza is reported to have been found, following extensive experiments in the National Institute of Medical Research at London, England.

Officials remained silent, but it is understood they have succeeded in transmitting the virus to animals and then cured them.

The tests are said to insure an effective preventive medicine, although isolation of the germ itself has not yet been achieved.

A successful cure could save Great Britain alone millions of pounds sterling. Insurance companies paid £1,500,000 pounds in January and February on policies held by persons who died of influenza. Deaths from influenza here were 8,462 in that brief period.

Wood Sugar

Production On Large Scale In Sweden Is Planned

Raw sugar made from wood has been planned for production on a large scale in Sweden. This sugar however, is not for human consumption, but for use as feed for cattle, for alcohol distillation and also as a material for making yeast. This wood sugar is a timely source of alcohol, as Swedish laws make it compulsory that all imported gasoline for use in motor cars be mixed with alcohol in the proportion of three to one. A newsy discovered method is said to make it possible to extract about 60 pounds of sugar from 100 pounds of wood. Swedish authorities report that one million long tons of this sugar can be made yearly in that country.

Not Providing For Future

People Of Pitcairn Island Believe End Of World Near

The end of the world is in sight according to the inhabitants of Pitcairn Island, and they are making no provision for the future. They are not planting young cocoanuts this year nor storing up anything for the future. The 193 people of the island are the descendants of English sailors who mutinied on the H.M.S. Bounty in 1790 and Tahitian women. Because of their isolation in mid-Pacific, the islanders are self-supporting. Cocoanuts and other fruits brought to the island by the crew of the "Bounty" are still growing there. Some of the agricultural implements still used were made from the iron of the "Bounty." Visitors are not allowed to smoke there. Neither are they permitted to drink alcohol or wear shorts.

Britain Buys Empire Wheat

Imports Into United Kingdom Show Heavy Increase

During the 12 months ending May, compared with the previous 12 months, the imports of wheat into the United Kingdom from empire countries showed an increase of about 52 per cent., says a report of the Dominion Bureau of Statistics.

The increase from Canada was about 80 per cent. and from Australia 17 per cent. Of the total imports of wheat into the United Kingdom for the 12 months ending April, Canada supplied 49.48 per cent. and Australia 25.57 per cent., while for the same period in 1932, Canada furnished 24.88 per cent. and Australia 19.8 per cent.

Back Three Generations

"Economically the world has gone back at least three generations," David Lloyd George said in an address at the Welsh Baptist chapel in the west end of London. The occasion marked the completion of 40 annual attendances by the former premier at the midsummer flower service held at the chapel. To the younger generation he said: "Don't be discouraged . . . you'll blunder through eventually."

Millions In Charity

The millions of the late Horace H. Rackham, 73, who made his fortune as one of the original stockholders in the Ford Motor Co., are going to charity. Rackham, at 45, borrowed $5,000 to invest in stock of the Ford Company, and 16 years later sold out to the Fords for $12,500,000.

Food From Many Countries

Delegates To World Economic Conference Have Special Restaurant

Between the plenary session speeches and the committee meetings, the delegates to the Economic Conference foregather in a special restaurant stocked with nearly all foods and liquids consumed in any part of the world.

There is much fraternizing as representatives of the various countries sample each other's favorite national foods—caviar, sandwiches and vodka, Chinese chicken, five kinds of German sausages, meat sauce from Japan and so on.

Beverages available run the entire range of wines, beers, whiskies, gins, brandies and liqueurs from a dozen countries, including Arack from Palestine, which bar attendants describe as being "popular among those persons who try anything once."

One waitress boasts of an ability to say "what's your order?" in three languages.

The delegates ride from their hotels to the Conference hall in big cars decorated with small national flags.

THE RHYMING OPTIMIST

By Aline Michaelis

SANCTUARY

To cross your threshold is to gain
A mood that waits me only there,
For in that chamber I attain
To peace like that which follows prayer.

How sweet, to know that where you dwell
No evil thing can find its way;
That in your presence all is well,
Serene and beautiful as day.

To cross your threshold is to find
How futile are tempestuous ways;
Your look, compassionate and kind,
Can touch with light life's darkest days.

To cross your threshold is to leave
Outside all bitterness and care;
On sacred ground how can one grieve?
What troubles can assail one there?

Your faith and trust God's own threads are,
As strongly shining as the sun;
With no dropped stitch of doubt to mar
The fabric which your years have spun.

An Aerial Train

Three Motorless 'Planes Successfully Hauled By One Motored Craft

Three motorless aeroplanes were hauled about the sky at Los Angeles by a fourth 'plane, acting as "locomotive."

This is understood to be the first instance in aerial history in the United States in which as many as three trailers have been towed simultaneously by one motored craft.

The demonstration was reported as a step toward realization of the dreams of airmen—that of operating aerial express trains with only the leading ship powered and the rest towed so they can be cut loose from the train at any landing field along a transport route.

Grow Red Cotton

Cotton Patches In Southern States Have Turned Complexion

The old description of "fields of snowy white" does not hold good any more for cotton patches of south Mississippi have gone red and changed the complexion of the land.

Planters are growing red cotton now because some experts say the red variety has a longer staple and can resist weevil better than its green cousin.

The stalks and leaves are a deep red and the fields look like lakes of blood. The blooms are pink and the cotton itself, of course, is white. The contrast is startling.

Will Direct War Library

Ex-President Hoover To Be Librarian At Stanford University

Herbert Hoover is to become a librarian.

The Stanford University Library Building is being remodeled to provide Mr. Hoover an office from which he will direct the Hoover War Library.

Additional space in the archives also will be provided to house additional material brought here from Washington by the former President.

The collection is the largest of its kind. Many documents filed there dealing with secret diplomatic negotiations preceding the World War and after it never have been made public.

Followed Instructions

The roadmaster, riding along on the train, sent a telegram to the section foreman which read as follows: "Grass and weed accumulated around bridge 365-M. Burn."

In a short time the roadmaster received a telegram from the section foreman: "Bridge 365-M. burned."

A bill in the British House of Commons proposes flogging for those cruel to animals.

New trains to run 110 miles an hour are being planned for United States railroads. That should pep up the "Let's beat it to the crossing" fans.

SUNBURN
RELIEVED OR PREVENTED BY "MECCA"
Excessive Sunburn is both painful and dangerous. Prevent it by rubbing in Mecca Ointment, or relieve it by liberal applications of Mecca. It quickly stops pain, soothes irritation and heals tender skin. "Mecca" is both economical and reliable.
Mecca Ointment is sold by all Druggists—25c, 35c (tube), 50c and $1.00.
MECCA OINTMENT

Little Helps For This Week

"Thou shalt rejoice before the Lord thy God in all that thou puttest thy hands to do."—Deuteronomy 12: 18.

"Be ye thankful in all things." —Colossians 3:15.

Thou who hast given so much to me
Give one thing more, a grateful heart;
Not thankful when it pleaseth me,
As if thy blessings had spare days;
But such a heart whose pulse may be
Thy praise.—G. Herbert.

If any one would tell you the shortest and surest way to all happiness and all perfection, he must tell you to make it a rule to yourself to thank and praise God for everything that happens to you. For it is certain that whatever seeming calamity happens to you, if you thank God for it you may turn it into a blessing. Could you therefore work miracles you could not do more for yourself than by this thankful spirit, for it heals with a word and turns all it touches into happiness.—William Law.

Fear Complex Is Bad

Demand Stops When People Are Afraid To Spend

With one-fifth of our working population unemployed, it is no longer possible to believe that jobs are part of the natural order of things. The result is that fear has become the dominant emotion of contemporary America—fear of losing one's job. Employees today are satisfied to keep what they have; they are grateful for very little. This complex is bad for everyone. It degrades the employee and makes him an insensate automaton. It kills both ambition and desire. It debases standards of living. And from the employer's point of view it is equally disastrous. Where there is no desire, there is no demand. People who desire nothing buy nothing.—Atlantic Monthly.

Greater Business Activity

Bank Debits In May Reach Highest Point In Two Years

Reflecting greater speculative and business activity, financial transfers in the form of bank debits in May reached the highest point since November, 1931.

The May figures stood at $2,619,600,000 compared with $1,876,800,000 in the preceding month, a gain of 25 per cent. after seasonal adjustment.

Gains were recorded in Regina, Calgary and Medicine Hat, in addition to the marked increase in Winnipeg. The net result in the prairie provinces was a gain of 65.2 per cent. The gain in British Columbia was 0.7 per cent. Vancouver showing an increase of 4.8 per cent.

Well-Known Artist

Horne Russell, Portrait Painter, Dies In New Brunswick

George Horne Russell, R.C.A., Montreal painter well known across the Dominion for his portrait work and views of maritime province shore and harbor scenes, is dead at St. Stephen, N.B. In 1909, after a painting trip in the Canadian Rockies, Mr. Russell was elected an associate of the Royal Canadian Academy of Arts, becoming a full member in 1919 an president of the academy from 1922 to 1926.

Left Small Estate

Mrs. Mary Ellen Smith, former British Columbia cabinet minister, the first woman in the British Empire to hold such a position, and much of whose work is written into social legislation in this province, left a gross estate of only $630 it is revealed by an application in supreme court for probate. The net is $330. Mrs. Smith died on May 3.

A Triple Tragedy

"Goodness gracious!" exclaimed his wife when she saw him, "and phwat have ye been at now, Pat?"

Pat groaned dismally. "Oi've had me nose broken in three places," he replied unhappily.

"Well," said his wife fiercely, "perhaps that'll larn ye to keep out o' them places!"

Austria's drive against foreign fuel is helping its coal mines.

IT'S LIVER THAT MAKES YOU FEEL SO WRETCHED

Wake up your Liver Bile

—No Calomel necessary

For you to feel healthy and happy, your liver must pour two pounds of liquid bile into your bowels, every day. Without that bile, trouble starts. Poor digestion. Slow elimination. Poisons in the body. General wretchedness.

How can you expect to clear up a situation like this completely with mere bowel-moving aids, oil, mineral water, laxative candy or chewing gum, or roughage? They don't make up your liver.

You need Carter's Little Liver Pills. Purely vegetable. Safe. Quick and sure results. Ask for them by name. Refuse substitutes. 25c at all druggists.

for STIFFNESS
Plenty of Minard's well rubbed in soon sets you right. Bathe the sore part with warm water before you start.
34 You'll soon limber up!

Why Conferences Meet With Failure

Of particular interest, in view of the failure of the World Economic Conference to achieve definite results, are various papers by Sir Arthur Salter which he prepared during his ten years' service as an official of the League of Nations and which have now been collected in book form.

Sir Arthur suggested in 1925 that the economic conference projected at that time by the League should be made up not of the representatives of Governments but by economists and business men. He wrote:

"Neither now, nor in the near future, is a general economic conference, composed of Government representatives, likely to have any practical utility—indeed, it might well do more harm than than good. Conferences fully Government in character must still be confined to special purposes and limited to modest tasks."

The 1927 Economic Conference was constituted according to Sir Arthur's suggestion. It reached definite conclusions which were completely justified by the events of the ensuing six or seven years, but those conclusions remained merely opinions on paper, for the very simple reason that the delegates to this conference had no means of translating them into fact.

By the same token, Sir Arthur's indictment of conferences fully Government character seems to have been quite justified by the inglorious conclusion toward which the present gathering in London is undoubtedly moving.

In these two successful prophecies, surely the basic trouble is touched. Only a conference of businessmen and economists, responsible to no electorate, can find the courage to reach definite and radical conclusions; only a conference of Government representations can put their conclusions into practical effect. The first type of conference must fail because it cannot produce action; the second type must fail because it cannot reach definite conclusion".

All of which boils down to an indictment of the degree of democracy which we have so far been able to attain. Perhaps when the people have the issues clearly presented to them—if that ever occurs—and when they are therefore at least in a position to use their heads, then successful international conferences may be held between representatives of Governments. Until that time, however, no startling success should be expected of any international discussion.

Lacombe Stampede August 16th

Lacombe 2nd Annual Stampede under the auspices of the Lacombe Agricultural Society will be held at the Exhibition Grounds Lacombe, on Wednesday, August 16th. An exceptionally good programme has been arranged, including: Bucking Contests, Wild Horse Races, Chuck Wagon Races, Democrat Races, Running Races, and many other features. A large midway will be on the grounds. The Lacombe Band will be in attendance at the Grand Stand all afternoon. A big dance will be held in the evening with first class music. Watch for further announcement next week.

SOURED ON THE WORLD?—THAT'S LIVER
Wake up your Liver Bile
—No Calomel necessary

Many people who feel sour, sluggish and generally wretched make the mistake of taking salts, oil, mineral water, laxative candy or chewing gum, or roughage which only move the bowels and ignore the liver.

What you need is to wake up your liver bile. Start your liver pouring the daily two pounds of liquid bile into your bowels. Get your stomach and intestines working as they should, once more.

Carter's Little Liver Pills will soon fix you up. Purely vegetable. Safe. Sure. Quick. Ask for them by name. Refuse substitutes. 25c at all druggists. 51
